

# enterprise europe

## Nyhedsbrev nr. 1

Her har du en kort beskrivelse af ønsker om samarbejde fra 80 europæiske virksomheder. Kontakt os, hvis du finder en eller flere interessante, så kan vi supplere med en kort profil af den pågældende virksomhed.

Du kan på samme måde søge samarbejdspartnere i alle 27 EU-lande. Få dit tilbud om salg eller køb, eftersøgning af teknologi etc. ud til omkring 500 erhvervsfremmekontorer - ca. 4800 arbejdsstationer, hvor der sidder personer der i lighed med NordDanmarks EU-kontor arbejder med erhvervsfremme i et land eller region.

Samtidig følger en oversigt mulige events og matchmaking hvor du har mulighed for at deltage.

## **Italiensk møbelproducent søger handelspartnere og købere (20081015008)**

An Italian company producing hand-crafted chestnut classical furniture both in series and in single piece under the indications of the customer, is looking for trade services and direct costumers in all Europe.

## **Partnere til EU-projekt søges (20081013027)**

The company is offering and looking for joint venture with European partners. It is looking for business partner(s) bringing the size required in terms of financial (revenue, profit, cash balance) and staff data's (human resources) to allow it addressing EUROPEAID tenders (and reach Middle Est. countries) without being initially and systematically rejected solely on organizational grounds. Partner(s) would only be asked to accept the consolidation of their own financial and human resources data's with the company in a mini consortium specifically created for the purpose of preparing the administrative files required for the tenders concerned. Partners wouldn't need to get involved in any other commercial and/or technical tasks unless they would be directly concerned by the tenders topics and willing to actively participate in them as commercial and/or technical actor. If not, they could be remunerated by negotiable commissions on the company's net profits and/or revenues from these tenders.

## **Italiensk kulsvier søger handelspartnere (20081013023)**

An Italian company producing pellet, briquettes and firewood is looking for trade services and direct customers. It is also interested to cooperate with other producers of pellet, briquettes and firewood and with wholesale interested to buy its products.

## **Fransk firma specialiserede i HD projektorer søger handelspartnere (20081013015)**

The use of full HD (High Definition) video projectors designed specifically for home cinema applications is becoming more widespread in homes, in hotels and in conferences rooms. Their uses need a specific screen and today nobody wants a "school screen" cockling, deforming the projected image and attached at his ceiling. That's why the French company has created a new generation of projection screen, able to remedy those drawbacks by closing in three parts behind a painting or wall decoration. The closed innovative screen takes less space than a common one and it has a decorative function as it is hidden behind a wall decoration. Once opened, the tensioned screen is not cockling and no creases appear, deforming the projected images. This invention is particularly adapted to reduce the front and tensioned projection screen size, and discreetly integrating it in living rooms, conference rooms, business establishments, academic institutions, with full HD (High Definition) video projectors. The product is already commercialized with different sizes: from 108\*205 cm to 146\*271cm. Innovations and advantages of the offer. This invention is particularly adapted to reduce the front and tensioned projection screen size, and discreetly integrating it in living rooms with full HD (High Definition) video projectors. Contrary to projection screens already commercialized, this new generation of tensioned screen has the particularities: - to easily close behind a wall decoration, reducing the place needed for the screen when it is not used - to be tensioned that means that the screen is not cocking and there are no marks of creases on the screen when it is open

## **Fransk firma søger stenhuggere (20081010037)**

The French company has developed an original mortuary object, made of wood or stone, symbolizing the dispersion of the close family and relations. At the moment, the wood object is entirely manually made and the company does not have the competence to manufacture stone products. Thus the company is looking at first for industrial partners specialized in stone works allowing to produce the mortuary object. It is also looking for distributors in Europe and America. The company is also open to financial support, or to sell the project to a company able to develop it.

## **Italiensk eksportør af køkkenudstyr indenfor restaurationsbranchen søger partnere (20081010004)**

An Italian company specialized in the import/export field, mainly of heavy duty kitchens equipments for hotels, restaurants, hospitals and refrigerated cabinets for butcher's shops, food shops and food supermarkets, cold rooms in prefabricated panels but even for other products, offers its trade services in al Europe. The company can work as buyer in Italy on account for European companies or as exporters of Italian factories.

## **Fransk underleverandør af maritime produkter søger handelspartnere (20081009009)**

French company specialized in the nautical sector is offering subcontracting activities and especially purchasing services. The company has developed a unique and very competitive skill in purchasing nautical goods and raw materials. They are offering that purchasing experience to other companies, ideally without organized internal purchasing department, and propose to collaborate under a subcontracting agreement. Our offer starts in finding the best prices, the best suppliers, the best services

## **Italiensk underleverandør af mekaniske dele søger handelspartnere (20081008018)**

An Italian company manufacturing special mechanical parts for various industrial applications is offering itself as subcontractor. Their industrial applications include: automotive, heavy and light transport, earthmoving and petrol-chemical industry. They can manufacture in large and small quantity end products, from printing or casting. They can also supply the crude piece thanks to the cooperation with foundries for cold and hot moulding. They assure quality by production control and technological tests through three-dimensions machinery. Working time lasts 24 hours and for 5 days.

## **Italiensk producent af automatiske døre søger handelspartnere (20081008010)**

An Italian company working in the field of the lifts and specialized in the production of guides for automatic doors and operators for lifts is looking for trade services in all Europe. The high quality of the products have allowed the company to collaborate with important producers of automatic doors both in Italy and in the foreign countries.

## **Britisk firma søger producenter af blændet glas (20081008006)**

This British company manufacturing glass paperweights for museums, galleries, gift shops and palaces is looking for manufacturers of glass blanks in the shape of a paperweight where pictures from museums, palaces etc can be inserted.

## **Italiensk producent af babyudstyr søger distributør (20081007010)**

An Italian producer of furniture complements, textile articles, toys and accessories, all intended for babies and their care is looking for a distributor able to promote all of its products.

## **Italiensk producent af madrasser søger distributør (20081007009)**

An Italian company producing mattresses made of innovative materials, latex pillow, box springs, metal and wood nets and fireproof mattresses and pillow for hospitals and hotels is looking for distributors in all Europe either retails or wholesales.

## **Italiensk producent af maskinelle anlæg søger handelspartnere (20081006021)**

An Italian company specialized in design, construction and installation of automated machines robotized plants and entire machining lines for every need related to industrial automations and processes is looking for trade services and direct costumers in all Europe. Its custom made automations is for assembling, implementation, technical modification, testing and final inspection of thermoplastic components for the automotive industry.

## **Italiensk firma søger detailhandlere inden for toiletartikler (20081006014)**

This Italian company is specialised in trade services of toilet products and it works all over Italian territory. The company is looking for large-scale retail or specialized retailers of toilets products wishing to spread their products all over the Italian territory.

## **Fransk producent af organiske produkter til personlig pleje søger distributører og importører (20081006013)**

The company is a French manufacturer of Natural and organic: - Soap (bar or liquid) - Shampoo - Detergent The company is looking for store-chains, distributors, importers in the following segments: natural & organic products, cosmetics, house & bath accessories

## **Fransk producent af kirkegårds udsmykning søger samarbejdspartnere (20081003016)**

The French company has developed an original mortuary object, made of wood or plastic resin, symbolising the dispersion of the close family and relations. At the moment, the wood object is entirely manually made and the company is looking for developing resin versions of its models. Thus the company is looking at first for industrial partners specialised in resin work allowing to produce the mortuary object. It is also looking for distributors in Europe and America. The company is also open to financial support, or to sell the project to a company able to develop it.

## **Slovensk producent af døre og vinduer søger samarbejdspartnere (20081003006)**

Slovenian company engaged in production of windows and doors (wooden or other materials) specialized in glued profiles for doors and windows is looking for a partner who wants to cooperate in this production (as distributor, representative, in joint venture, as merger...), increase production, form new programme of products.

## **Østrigsk firma søger leverandører indenfor værktøjsindustrien (20081002005)**

An Austrian company is a successful service provider in the area of Tool Management, the provision with and maintenance of machining tools in the manufacturing industry and is looking for suppliers within the tool industry.

## **Italiensk konsulentfirma søger handelspartnere (20081001022)**

An Italian professional consultant specialized in public fund-raising at regional, national and European level is looking for trade services in all Europe in order to find companies of all sectors wishing to invest in Italy.

## **Frank producent af aluminium søger distributør (20081001021)**

French company manufacturing quality unsinkable aluminium speedboats seeks European distributors. Regional exclusivity is offered. Their aluminium boats are high quality products and are often featured in the press.

## **Fransk producent af smoothies søger distributør (20081001010)**

French company in the agro food field, produces Premium 100% natural fruit-mix beverages (4 sorts of smoothies) and is looking for a distributor. The potential distributor should be specialised in distribution to supermarkets, foodservice organisations (bakeries, bars and restaurant chains) and company restaurants.

## **Italiensk producent af mønstre søger handelspartnere (20081001005)**

This Italian company formed a partnership with a local companies specialized in the production of patterns and finished products for leading national fashion companies. Out of the manufacturing of collection prototypes, the collaboration yielded interesting results from the definition of the industrial process of standard clothes manufacturing to the search for materials suppliers, to a more organic planning of innovative products. The company is looking for trade services in all Europe.

## **Skotsk producent af skotskernet stof søger agenter og distributører (20080930044)**

Scottish company specialising in the design and manufacture of unique and exclusive tartan products is looking for agents and distributors in a number of European countries.

## **Skotsk whisky producent søger agenter og distributører (20080930042)**

Scottish company specialising in unique Scotch whisky and whisky-based products and gifts is looking for agents and distributors in a number of European countries.

## **Engelsk/hollandsk logistik firma søger partnere til udvikling af forsyningskæde (20080930039)**

UK & Dutch company specialising in global logistics service provision is looking to engage with European importers to develop their logistical supply chain from China, the Far East and the USA.

## **Tysk data-recording firma søger partnere (20080930009)**

A German SME from Lower Saxony specialised in data recording, access control and tele-diagnostics has developed a web-based Anti-Theft-System (ATS) operating on GPS-/GSM-basis. The system prevents unauthorized use of construction machinery and informs the client of its activities and position. With the company's products a company active in the construction machinery business can generate an extra income which is independent from cyclical fluctuations. Due to the fact that developed system can be installed in any mobile equipment with own battery ignition as Anti-Theft-System (ATS) (construction machinery, cars, trucks, yacht, boats, etc.) the scope of application is vast and offers lots of business opportunities. The company is searching for a partner in the countries mentioned above to create together a joint-venture company dedicated to the market introduction of the brand and the sales of its products in the local markets.

## **Fransk telecom firma søger handelsmæglere (20080930036)**

French company providing telecom services (edition of software) is seeking European trade intermediaries. The company sells a service that, in complement of tools of communication that are the email and the IM, opens on Internet and the mobile a permanent channel of exchange of office automation and multimedia documents between individuals, grouped together in small communities (included) or not.

## **Samarbejdspartnere til mobil-broadcasting søges (20080930023)**

The company wishes to collaborate with European trade intermediaries (kit furniture producers) to provide them with a solution/service allowing them to broadcast assembling notices to their clients via mobile phone.

## **Italiensk producent af udstyr til bl.a. fjerkræ søger distributører (20080930020)**

This Italian company manufactures poultry and rabbit equipments addressed both to smaller breeders, family/domestic use and hobby and industrial use. The company is looking for wholesaler and distributors that would like to trade the products and distribute them to shops, retailers and final users.

08 PL 62AP 0J3E

**Medical/orthopaedic furniture for proper back/spine support, positioning and relaxation.**

A Polish SME is looking for ready solutions, possibly patented, of producing orthopaedic furniture for people with back/spine problems or furniture used for prevention of such problems. Both medical and home/office solutions are sought for.

The firm is looking for partners such as private inventors/patent holders or producers of such furniture willing to license their technology. Solutions should be researched and/or tested. Preferred types of cooperation are license or commercial agreement.

08 NL 60AF 0J11

**High-resolution thermal image scanner to detect breast cancer**

To reduce the mortality of breast cancer, diagnosis and prevention seem to be the most promising options. The use of complementing diagnostic techniques increases sensitivity and specificity in early detection. A Dutch SME offers a patented device which captures a high resolution thermal image of the breast without radiation and other unpleasantness. The company is looking for a partner with expertise in breast cancer problems and a wide network or market in use of medical devices.

08 SI 68CN 0J0J

**Innovative environmentally friendly toilet mechanism for more hygiene**

Slovenian R&D organisation developed and patented an efficient invention related to hygiene of a toilet pan together with a flushing mechanism of a toilet storage tank. In comparison to existing systems invention enables higher hygiene standards and gives a substantial value added to a final product. A licence may be purchased by interested parties.

08 ES 27F4 0IZ5

**A Novel Therapeutic Target For The Acceleration Of Injured Nerve Regeneration**

An Andalusian research group has developed a novel invention referred to the use of inhibitors of the activity and/or the expression of the endothelial isoform of the enzyme nitric oxide (NO) synthases (eNOS) for the preparation of a drug which allows accelerating the regeneration of injured peripheral nerves. They are looking for licence agreement or technical co-operation.

08 FI 30I1 0J5V

**Computer simulation tools for drug discovery and development**

A young Finnish University spin-off company offers an alternative approach for drug development which diminishes the need for expensive laboratory work. The method is based on scientifically verified mathematical computer models of cell function. Partners involved in drug discovery are sought for technical co-operation.

08 ES 28F9 0IW0

**Web management system for disease and disability associations**

A Spanish company, specialised in ICT technologies for the social and health sectors, has developed a web management system for disease and disability associations. The system models the work processes at an administrative, clinical and social level empowering the work of the professionals. The system integrates communication modules that enable a cooperative work between associations and professionals. The company is looking for partners for commercial agreement with technical assistance.

08 PT 65BN 0J2L

## **Real-time system for body kinematics monitoring**

A Portuguese University has developed a sensor network system for real-time monitoring of body kinematics (posture, gesture and movement monitoring) with 1-degree resolution in 3D space. The main innovation of the system lies in the correction of the earth gravitational force. This technology is more accurate and less expensive than other. Partners interested in applying this system in rehabilitation of patients, sport activities monitoring, virtual reality or others are sought.

08 ES 26E5 0J3G

## **License to manufacture a single use medical device**

A Basque Company seeks a license for Europe to manufacture a single use / disposable medical device based on silicone or plastic. The company is expert in large scale technical silicone and plastic manufacture using injection moulding and extrusion technologies.

08 PT 65BN 0J2O

## **Hybrid braided vascular prosthesis**

A Portuguese University has developed a new technology for production of a wide range of hybrid braided vascular prosthesis, where different diametres, mechanical properties, wall thicknesses and permeabilities can be achieved, according to the blood vessel to be replaced. A cost-effective manufacturing method has been obtained. The University is looking for partner manufacturers of endovascular devices willing to bring improved vascular prosthesis onto the market.

08 FR 0L8 0J4J

## **New developments in the area of topical delivery, especially foam technologies**

An independent consultant that provides business development services to pharmaceutical and biotechnology companies requires new developments in the area of topical delivery with a particular interest in foam technologies for an Italian pharmaceutical company. The company is interested in licensing or co-development opportunities based on novel foam formulation and delivery technologies suitable for topical delivery of existing and development stage pharmaceuticals

08 IT 56Z4 0J7Z

## **New process for the preparation of a vegetable yogurt**

A well-known Italian SME operating in the field of processing and preservation of fruit and vegetables, has developed a new process for the preparation of a vegetable yogurt formed by fermentation of vegetables and fruits under the action of lactic bacteria.

The company is interested in various agreements including Licence Agreements and Commercial Agreements with health and natural food worldwide manufacturers.

08 FR 38m5 0IYR

## **FP7 project (IAPP): consortium seeking for SMEs involved in dairy products / vegetables puree**

A consortium, coordinated by a French food safety agency and including a Belgian university, a French laboratory and a Greek SME is looking for industrial small business in the dairy products for an FP7 project.

Objectives are to provide solutions to risk detection relating to bacillus cereus (bacteria), knowledge, skills and expertise for the improvement of processes in the food industry (dairy products and vegetables purees).

08 PL 62AS 0J0F

## **Plate heat exchanger – recovering heat from fumes and waste gases**

Polish SME company producing equipment for paper mills has developed continuous plate heat exchanger (recuperator). The device is used to heat air or gas fuels by utilizing the heat in the exhaust gasses, fumes and waste gases. Other uses are also possible, depending on the needs. A recuperator can be used in any factory/plant where large masses of hot gas/air are emitted. The company is seeking partners for technical cooperation and commercial agreements with technical cooperation.

08 PL 62AS 0J0A

## **Industrial water purification by means of floatation.**

Polish SME company producing equipment for paper mills has developed a machine to separate solid and colloid pollutants from industrial water. The machine can be used in paper mills and other production plants that use water for their activities. It shortens water retention in the plant and allows for heat recovery. The company seeks industrial partners interested in further development of the invention and partners for commercial agreements with technical assistance.

08 SE 67CI 0J4L

## **Biological cleaning of ballast water**

A Swedish company has developed a new energy efficient, biological, technology in order to provide a safe, energy and cost efficient method for biological cleaning of this water. The company wants to find cooperation partners developing similar applications within this area, and/or that has competences in order to help develop this product, i.e. the type of cooperation sought is commercial agreement with technical cooperation.

08 GR 49Q1 0ISF

## **IT products related to energy management and consumption**

A Greek IT company is interested in entering the Energy sector, by providing to its clients solutions related to the management and consumption of energy in buildings. The company is looking for several types of collaboration, depending on the nature of a given project and the nature of the product itself.

08 GR 49Q1 0IT2

## **Innovative electrical circuit for rotating intensity of light**

A small Greek technical company developed an innovative light control system providing the ability to increase and decrease the intensity of light independently for each lamp, successively, in scheduled time intervals and without any human intervention. In similar automations the process is manual and the increase and decrease of light intensity is the same for every lamp. Collaboration is sought for the commercial exploitation of the patented product and its promotion to the European market.

08 GR 49Q1 0J8U

## **Solar energy to provide central heating for houses, pools, green houses, etc**

A Greek inventor, holding 5 patents, offers an innovative use of solar energy to provide central heating for a variety of premises. The design encompasses a solar panel with a single mould polyethylene water tank and photovoltaic panels for capacity compensation. The result is a highly fault tolerant non-polluting structure with minimal maintenance cost. The range of use is very wide (houses, pools, green houses, etc). A license agreement for the transfer of rights is sought.

08 ES 27F4 0IZ4

## **A new biological pre-treatment for organic solid waste management**

An Andalusian research group has developed a new biological pre-treatment for organic solid waste management that consists in a new operating procedure that allows increasing the hydrolytic rate and the anaerobic biodegradability of pre-treated waste. Main advantages of this treatment consist in the increase of both the global rate of anaerobic digestion process increases (160%) and the production of biogas (16%). They are looking for licence agreement and technical cooperation.

08 DE 1593 0J39

## **Web-based Sustainability Software for Corporate Environmental Reporting for Business Related Affiliates for SMEs**

A German university researching on how to improve and ease sustainability reporting has developed a software prototype for a computer assisted, step-by-step generation of reports with automatic data import and transformation into XML. The system enables SMEs to participate in the community of companies reporting on their performance on economical, ecological and social matters with respect to their specific needs. Industry partners are requested for license or joint venture agreements.

08 DE 0855 0J7W

## **In situ chemical oxidation system for contaminated aquifers**

Two German companies have co-developed a highly efficient method for in situ treatment of contaminated aquifers by injection of oxidants like peroxide and permanganate. The process is characterised by high performance, low energy costs, recycling of washing oil and possibility of indirect or direct discharge. End-users interested in applying the process are sought as well as engineering offices for joint projects.

08 DE 0855 0J7X

## **Know-how and technologies for wastewater treatment and groundwater remediation**

A German company offers know-how and technologies for the treatment of industrial and municipal waste water and also for groundwater remediation. A variety of processes are available and specifically tailored to the individual problem. Unique expert know-how in biotechnology and processes and extensive experience from numerous projects lead to optimum results. End-users interested in innovative and effective solutions are sought as well as engineering offices for joint projects.

08 DE 18A5 0IXU

## **Development and production of a frequency controlled heat pump for application in geothermal heat devices**

A German SME active in the field of renewable energies is searching for a control of heat pumps to obtain an optimal rotational speed for the respective loading condition and the respective exterior and interior temperatures. They are looking for a licence or technical cooperation.

08 ES 29G6 0J7O

## **Volatile Organic Compounds (VOCs) thermal cleaning**

A Spanish company has deep knowledge in the manufacturing, installation and maintenance of plants for thermal cleaning of VOCs. This company is able to manufacture, install and provide after sales service of such equipments customised to the specific needs of a wide range of industrial sectors. The company offers licence and commercial agreements with technical assistance to partners who will assume part of the commercialisation, manufacturing, installation and maintenance of the equipments.

08 FI 30I2 0J5M

## **Extremely sensitive and selective gas analysis from low sample volumes in demanding environments**

Finnish SME has developed Fourier Transformed Infrared (FTIR) and Photo Acoustic Spectroscopy (PAS) technology. New improvements are tested and prototype measurements verified sub-ppm (parts per million) detection limits of gas concentrations using black body radiation source. Highly linear and wide dynamic range constructions allow quantitative analysis of e.g. wet gases using few millilitres of sample gas. Partners are sought to develop further applications and to exploit existing know-how.

08 DE 0957 0J33

## **Ammonia removal from digested substrates and production of ammonium sulphate fertilizer by using exhaust heat of CHP without addition of alkali or acids**

A German SME has developed a procedure to remove ammonia from manure and digested substrates by heating it to 80°C under slightly reduced pressure. The evolving gas is absorbed by an aqueous solution of an absorbent to yield a highly concentrated solution of ammonium sulphate, a valuable fertiliser. No further chemicals have to be added. The company seeks for a commercial agreement with technical assistance with constructors and operators of biogas and sewage treatment plants, respectively.

08 BE 0427 0IWQ

## **Vertical axis wind generator with improved energy yield**

A Belgian SME has designed a vertical axis wind generator employing a novel strategy to optimise the energy yield. The technology is intended for domestic and other small-scale applications. Calculations have been verified by an independent scientific authority, and a conceptual prototype is available. The company is looking for collaboration to develop a fully functional prototype, and subsequent production and sales.

08 FR 32j0 0J19

## **Industrial adhesive process for structural wet wood**

A small industrial sawmill wants to develop eco-responsible finger-jointed or lamellate wood products in Alsace. The process will use wet woods. For developing these products, the company wants to establish a partnership to develop environment friendly adhesive. The partner sought might be a company or a research centre. This partnership will allow developing, validating with test and commercialising the adhesive obtained.

08 GR 49Q1 0ISM

**Integrated ESM / ECM (electronic warfare-support measures/electronic countermeasures) system with high efficiency against modern radio emissions**

A Greek company is offering an integrated ESM / ECM system with high efficiency against modern radio emissions. The system is built to dominate the RF (radio frequencies) spectrum in the new century. It provides excellent interception and jamming performance against all types of modern military radio emissions. The company is looking for Licence Agreement and Financial Resources.

08 ES 28F9 0IZG

**Ticketing software solution**

Spanish company specialized in new technologies and software engineering has developed a ticketing software solution for selling and collecting tickets that enables a professional management for every kind of events and venues. The company looks for ticketing companies (technology and content providers), and system integration companies able to reach technical cooperation and/or commercial agreement with technical assistance.

08 ES 28G2 0IZN

**Electrical and reusable device for microarray readout**

Spanish Research Institute has patented a new electrical microarray reader for standard microarrays on low-cost substrates as those used in traditional fluorescence microarrays. The reader device can be manually or automatically washed and reused an unlimited number of times. The development of readers for medium-high density microarrays is feasible without additional technological complexity. Industrial Partners in the Instrumentation and Biotechnology area are sought for licence agreement.

08 FI 30I2 0J8G

**Software Validation Facility for embedded systems**

A Finnish SME, specialised in the satellite on-board software development and validation, has developed a software validation (SVF) facility for workstation testing of real-time embedded software. SVF is a custom

08 ES 26E5 0J79

**Bioprocesses development on static support bed**

A Basque SME specialised in the development of technology and production processes for biopharmaceuticals offers a technology, Static Support Bed, developed to provide solutions that enable the efficient production and processing of biopharmaceuticals, from therapeutic cells to proteins. The SME is interested in licensing partners who see in SSB technology an opportunity to increase the value of their own products and who may demand customisation of SSB technology for a particular application.

08 DE 1593 0J32

**Prototype of a Federated Enterprise Recourse Planning (ERP) System**

A German university has developed the concept of a Federated ERP (FERP) system as a theoretical approach. The system offers the possibility to choose ERP components from different providers in order to compose an individualized overall ERP system. A prototype has been implemented based on the SOA paradigm where typed Web Services represent different components of an ERP system. The university is looking for partners to develop commercialized products based on the existing prototype.

08 SE 67BY 0J3O

**Low-cost microwave vehicle radar for obstacle detection**

A Swedish SME has developed a new technology platform for cost-efficient design and manufacturing of 76 - 81 GHz short-to-long range (SRR and LRR) microwave radars with electronic scanning capabilities. They are interested in technical cooperation with companies working with radar applications for traffic safety (car radar, train radar, road surveillance) or process automation. Depending upon the application, either a license agreement or small-scale production can be offered.

08 SE 67BY 0J5T

**Chipless low-cost electronic ID system with all printed tags**

A Swedish research institute has developed a chipless electronic ID technology for low-cost tagging of flexible substrates. The ID codes are all-printed and compatible with EPC (electronic product code). Possible applications are product and asset tracking, supply chain automation, access control, brand name protection and authentication. The institute is looking for technical cooperation and application development with industry, such as printing houses and packaging companies.

08 FI 30I2 0J5O

**Submillimeter-wave imaging through obstacles e.g. soil and clothes**

A Finnish based company has developed sub-mm imaging technology based on antenna-coupled bolometers which are sensitive enough for passive detection of sub-mm wave radiation for example in security screening applications. Partners are sought for development of further applications and to exploit the existing know-how.

08 FI 30I2 0J5P

**Failure detection, isolation and recovery technology with diverse applications**

A Finnish high-technology SME specialised in development of highly reliable and innovative high quality software products for space and industrial applications, has developed a technology for failure (or fault) tolerant and self-diagnostic systems. Having successfully applied this technology in space projects, the company now looks for industrial and commercial partners for new applications.

08 DE 1593 0J44

**Fast simulation of ring-rolling processes**

An institute of a German university has developed a fast simulation method for three-dimensional material flow that is capable of calculating the geometry of the ring in radial-axial ring-rolling-processes. The developed software package is based on elementary methods to support the design of optimised rolling strategy before the real production starts. The partners sought are manufacturers of ring products or software developers to test and further develop the simulation tool.

08 GR 49R2 0J6N

**Virtual tour / virtual reality equipment for the presentation of buildings and real estate projects**

A Greek SME active in the field of real estate and the development of relevant projects, is seeking virtual tour / virtual reality technologies and equipment for the effective presentation and promotion of its buildings and developments to potential clients. The company is looking for technology and equipment providers for commercial agreement with technical assistance for the integration of different components to the required needs.

08 FR 35K8 0J5B

**Manufacture of solvents and polymers using vegetal oils**

A French company is looking for technologies and "green process" for manufacturing solvents and polymers (polyols, polyesters) using oils as rapeseed (colza) oil, sunflower etc... The company is looking for a technology fully developed or still in development.

08 PL 62AS 0J00

**Extra light bicycle hubs for professionals.**

A micro company from Poland produces very light bicycle components. It specializes in wheel hubs. The products consist of materials used in the production of aircraft. They are very strong and extra light (73 – 110 g), what is important in professional bicycles (MTB and road bikes). The company seeks partners for commercial agreements with technical assistance and other experienced companies able to integrate the product in their own bicycle/wheel production.

08 SI 68CN 0J3X

**Future panel proposals**

An European multinational with offices in the UK and Slovenia is looking for cooperation with world-class people who have innovative ideas about future construction panels for use in luxury buildings (buildings having unique design & using new materials) whilst maintaining fire resistance, sound reduction and thermal insulation properties, preferably with improved sustainability and manufacturability. The company is looking to license-in proposed panel solutions (new materials or designs).

08 SI 68CN 0J3M

**Non-combustible & hydrophobic boards**

A Slovenian multinational has developed a non-combustible fire protection panel which is also hydrophobic. The raw material for these panels consists of waste mineral wool, vermiculite, water glass, glass nets as well as organic additional material. The panels are available as plain or decorated. Applications include ceilings, floors, roofs, high performance doors, external walls and damp places. The company is looking for partners interested in buying the product rights.

**Foldaway trailer for transporting motorcycles**

A Greek inventor presents a new innovative folding trailer for carrying motor-cycles. The mentioned product is very compact and easy to use (it folds easily in 3-5 minutes). The inventor is mainly looking for a licence agreement.

08 GR 49Q1 0ISH

**Monitoring inventory and assets with handheld devices**

A small Greek company, yet very active in the field of RFID (Radio-frequency identification) presents a warehouse management application which enables the user to use both RFID technology and barcode capabilities. It is a good opportunity for SMEs to utilize the latest technical solution in warehouse management. The Greek company is looking for end-users or representatives for multiple forms of collaboration.

08 DE 1593 0J3C

**Efficient generic operators for identifying and tracking semantic concepts in Enterprise Software Systems and System Landscapes**

A German university has developed an interdisciplinary approach for an efficient Application Life-cycle Management of Enterprise Platforms and Very Large Business Applications (VLBA) – that semi-automatically identifies and localizes semantic integration concepts and visualizes integration ontologies in semantic genres. Software specialists from academia and industry interested in technical cooperation and commercial agreements are requested.

08 IT 55X5 0J7A

**Reinforced autorechargeable motorized locks**

A SME, located in Rome, offers a reinforced auto-rechargeable motorized lock in stainless steel. The lock is easy to open & to lock with a pressure of a button or remote control. Particular is its fast mechanical & electrical assembling capability even in areas without electricity; locks can be supplied using photovoltaic array with doors or gates far from electrical links. The SME is looking for Distributors, manufacturer, assemblers interested in commercial agreements with technical assistance

08 ES 27F4 0IZ6

**A novel system for obtaining completely focused images in high magnification microscopes**

An Andalusian research group has developed a system which allows obtaining completely focused images in high magnification microscopes, so that the focus depth can be brought beyond the values got by optic laws. The best advantages are its adaptability to almost all microscopes, use with scanned images and overcoming limitations regarding the limited depth of focus. They are looking for licence agreement or technical co-operation.

08 ES 27F4 0IZ3

**A novel navigation light trainer**

An Andalusian research group has developed a novel navigation training system to improve teaching methods of the international lighting navigation rules. The best advantage is its possibility to be controlled automatically. They are looking for licence agreement and technical cooperation.

08 PT 65BN 0IKP

**Device for reducing bycatches in purse seine fishery**

A Portuguese university, highly experienced in coastal fisheries, developed and tested experimental By-catch Reducing Devices (BRD). The BRDs can be used on demersal purse-seine fishery and were proven to be effective on the reduction of by-catches and discards, with an increase in the catch of larger fishes. The university is seeking partners within the fishery industry to establish technical consultancy deals and joint further development to adapt the BRDs to different types of fishing nets.

**Full field and non contact optical system for surface analysis and profilometry**

A French SME has developed a new optical system for surface analysis and profilometry enabling full field operation and based on non contact measurement. The system is compact and can be mounted on a 6 axis robot. The SME is looking for industrial companies interested in marketing agreements with technical assistance or in technical cooperation.

08 FR 3116 0ISL

**Development of a solution to clean silver by dishwasher**

A French medium sized company specialised in silver items, for table accessories, jewellery, gifts and homes decorative items is looking for a technology which would be able to remove tarnish stains from silver items. The technique must be very easy to use for private individuals or for hotel and restaurant environment.

08 FR 3116 0ISN

**Development of a solution to give colour to metal**

A French medium sized company specialised in silver items for table accessories, jewellery, gifts, and home decorative items is looking for a technology to give colour to silver stainless steel or brass. In the future, the process must be integrated in their workshop production. The technology can be in phase of development or available in the market (transfer of technology), but they are open to participate in a new project.

08 FR 3116 0IS4

**Development of a solution against silver tarnish**

A French medium size company specialised in silver items for table accessories, jewellery, gifts, and home decorative items is looking for a technology compatible with their specifications (high level of aesthetic quality), to prevent the tarnishing of items. In the future, the process must be integrated in their workshop production. The technology can be in phase of development or available in the market (transfer of technology), but they are open to participate in a new project.

08 FR 0L8 0J56

**Biological process and suitable compositions for the treatment of plants, especially for vines**

A French small company has developed a biological phytosanitary treatment of plants, specially vine, to reduce their sensitivity to main diseases.

Instead of using basic chemical products (their regular applications lower their efficiency), this treatment is based on a process consisting in powdering different specific biological compositions at different stages of the plant growth.

The company is looking for partners that could manufacture or sell the products.

08 FR 32I9 0J53

**Polymer-based balls of perfect sphericity**

The technology offer deals with a high rate-fabrication process of perfect polymer based-balls.

The process allows perfect control of the geometrical characteristics. For example, their diameter varies from 500µm to a few mm and their sphericity varies from 99.6% to 99.9%. The process is versatile and doesn't require modification to obtain balls with different characteristics and can use different polymers. The polymer porosity is also controlled and can be adapted to the desired application.

08 FR 33j6 0IU0

**Looking for new material : Microwaveable Material for Nonwovens**

A French company is looking for a new material able to generate heat after domestic microwave activation. This material must reach about 40 to 50°C and heat its close environment for a minimum of 1 hour. This material can be solid or liquid, and has to be incorporated into a non-woven fabric. The company is searching for a strategic partner able to offer or develop an innovative solution.

08 SE 67CI 0J3N

**Easy to use, versatile fence system for show jumping**

A Swedish design company has developed a new system for show jumping fences. The system is designed so it can provide for the different types of fences that exist, such as vertical (or upright fence) oxer, triple bar etc. This new system is cheap, light weight and safe. It is made out of plastic and aluminium. The company is looking for a partner for technical co-operation, manufacturing agreement, commercial agreement with technical assistance or a licence agreement.

## National handlingsplan for miljø og sundhed (2007-2015)

I forbindelse med den kinesiske handlingsplan for miljø og sundhed, åbnes der nu op for 5 områder, hvortil der ønskes ekspertise til at:

1: Bygge et systematisk overvågningsnetværk op omkring miljøforurenings effekt på folkesundheden og efterfølgende analysere grundlaget og resultaterne, så regeringen har et videnskabeligt afsæt, hvorfra den kan udarbejde effektive metoder til at overkomme problemerne og udforme politikker i tråd hermed.

2: Styrke systemerne til risiko advarsler i forbindelse med miljø, sundhed og nødberedskabet. Herunder også at der udføres risiko evalueringer, forbedring af de nuværende advarselssystemer og en styrkelse af den nuværende kapacitet til at klare nødstilfælde.

3: Opstarte et informationsdelings service system, oprette en database til monitorering, samt at forbedre delingen af informationer og optimere rapporteringssystemerne.

4: Undersøge de nuværende omstændigheder i forbindelse med miljø og sundhed, samt dokumentere den teknologiske udvikling og forstærke konstruktionen af professionelle arbejdsteam.

5: Forstærke offentlig eksponering og uddannelse, samt aktivt at promovere national og international handel.

## **B2Fair kontaktbørs for virksomheder**

D. 11.-14. november 2008 afholdes dette års underleverandørmesse Elmia Subcontractor med mere end 1100 udstillere fra over 25 lande og godt 15.000 besøgende. Messen henvender sig til virksomheder, der beskæftiger sig med produktionsmetoder, færdige produkter og komponenter, halvfabrikata og råmaterialer, værktøjer og fiksturer, samt relevante organisationer og services. For yderligere information om B2Fair kontaktbørsen, se flg. link:  
<http://www.b2faironline.com/?E=23&a=111>

## **Europæisk seminar om energi i Bruxelles**

Den permanente danske repræsentation ved EU arrangerer sammen med den finske repræsentation og den svenske ambassade et seminar om vedvarende energi d. 24.-25. november 2008 i Bruxelles. Seminariet er en mulighed for at få insider information om kontrakter og samarbejds-muligheder i relation til EU og EU støttede projekter i tredjelande.

Målgruppen er ledende europæiske konsulentfirmaer med speciale i fx vedvarende energi, energibesparelse, biomasse, solenergi og vind- og vandenergiløsninger. Andre virksomheder med interesse for området er også velkomne.

Sidste frist for tilmelding er d. 24. oktober 2008.

For yderligere information kontakt NordDanmarks EU-Kontor

## **Deltag i Europas største IKT event i Lyon 25-27. nov.**

Konferencen er organiseret af EU-kommissionen og forskere, innovatorer og beslutningstagere inden for digital teknologi forventes at deltage.

På konferencen vil:

- Europas fremtidige prioritering for forskningsstøtte på IKT området præsenteres.
- Problemstillinger i forbindelse med offentlige politikker, der kan stimulere innovation via IKT udvikling og optagelse vil diskuteres.
- Etablering af forsknings- og forretningspartnerskaber vil være en mulighed, og de nyeste tiltag inden for forskning på IKT området vil præsenteres.

Læs mere om konferencen og registrering til denne på flg. link:
