## Nyhedsbrev nr. 29

### International machmaking

I Virksomhedsforum vil vi gerne hjælpe dig med at skabe internationale kontakter. Vi er en del af Enterprise Europe Network, og vi er sat i verden for at matche nordjyske virksomheder med partnere i udlandet – og denne service er gratis for dig!

Vi står klar til at hjælpe netop din virksomhed med rådgivning eller konkret hjælp eksempelvis til at finde leverandører eller distributører.

**Det eneste du skal gøre er at kontakte os!**

## **Polisk producent af lyssystemer søger distributører**

A Polish company is specialised in production of individual LED (light-emitting diode) lighting systems. Wide range of offered products allows designing freely a lighting of interiors, buildings elevation, furniture, stairs, gardens, swimming pools etc. Offered systems might be used as the main or decorative lighting. LED technology makes the system much more efficient, the energy consumption is much lower and durability is significantly higher. The company is searching for trade intermediaries and offers subcontracting as well.

20090708014

## **Polisk frugt og grønt grossist søger handelspartnere**

A Polish distributor of fruit and vegetables from all over the world is looking for trade intermediaries and suppliers in European countries. The Enterprise sells its products on the domestic market and in most of the European countries. The company has a wide network of reputable fruit and vegetable suppliers from the whole Europe, Turkey, Argentina, Chile and the Republic of South Africa. The Company has been very successful owing to its largely developed network of long-term relations with reputable clients on the wholesale market in Poland. Owing to excellent quality of its products and professional service, the enterprise has been successful in selling its products to supermarkets. At present, the company keeps 4 warehouses: in Krakow, Warsaw and Przemysl and a logistic platform in Warsaw to service large commercial networks of super and hypermarkets. Przemysl-based warehouse is an excellent base for exporting goods to eastern markets, in particular to Ukraine. It is the ambition and the main goal of the enterprise to ensure an effective and optimum distribution of fruit and vegetables in consideration of needs and satisfaction of our suppliers and ensure a full range of products in all seasons to their clients. The company is searching for trade intermediaries in all European countries, especially in Scandinavian countries and Russia. The Enterprise is also interested in finding new suppliers.

20090708009

## **Lettisk indretningsfirma søger handelspartnere**

A Latvian company with experience in interior decoration is looking for subcontracting activities for construction companies. Company specializes in interior decoration in the field of dry work. Company provide following services: - works with gypsum wallboard; - woodwork; - painting; - flage work. All works are made according to technology. Company has experience in work in all weather conditions, as well as experience in interior decoration of bank premises, offices, living apartments.

20090708001

## **Litauisk forhandler af drikkevarer søger handelspartnere**

A Lithuanian company specializing in trade of beverages (fruit juices, fruit nectar, fruit drinks, juice concentrate, honey, marmelade, essential oil; tomato products, sunflower oil) is looking for trade intermediary services. The company maintain relations with manufacturers of high quality products (ECO, KOSHIER, HACCP, SGS, SGF, PROFERA, FDA, Codex, etc.).

20090707017

## **Polisk software udvikler søger nye samarbejdspartnere**

A Polish SME specialises in a wide range of IT solutions based on open source software: - content management systems - client relations management systems - e-learning systems - office applications The company is offering subcontracting on the international market. The staff is prepared to work with partners from all over the world.

20090706038

## **Fransk virksomhed på udkig efter vandtætte solpaneler**

A French company specialized in environmental solutions for the industrial sector is looking for manufacturers of watertight solar panels or photovoltaic cells to complete its current products range. The French company is ready for a distribution agreement. Its current products range includes flood protection and retention barriers and permanent stoppers to avoid contamination of toxic products in the industrial sector and to protect environment.

20090706014

## **Italiensk vinbonde søger handelspartnere**

Italian company, specialised in production of a wide range of fine Italian wines is looking for trade intermediaries (distributor, agent, representative) of red wine and white wine.

20090703043

## **Makedonsk producent af naturlægemidler søger distributører**

A Macedonian pharmaceutical company is specialised in production of own patented herbal medicines. Business cooperation is sought in partnership cooperation with companies interested to be representative or distributor of the companies' products in the respective countries. Also, the company can offer their facilities for production of liquid and solid pharmaceutical forms (extracts, tablets, etc.) and for processing of all types of materials of herbal origin.

20090703018

## **Estisk producent af plasticemballage til fødevarer søger handelspartnere**

An Estonian producer of plastic packages for food industry is looking for trade intermediary in order to provide its products to the food industries such as meat and confectionery industries. The company would also like to cooperate with companies who act as agents to big central kitchens or grocery chain stores.

20090703017

## **Fransk producent af køkkenudstyr søger forhandler**

French manufacturing company is looking for distributors in the professional sector (catering equipment) for the distribution of induction hobs.

20090703003

## **Litauisk producent af plademetal søger distributører og salgsrepræsentanter**

A Lithuanian production company specialized in manufacturing sheet metal products is looking for sales representatives or distributors for following products: letter boxes, flat ventilation ducts, access panels. Also company offers sheet metal (from 0.2mm to 2mm) products subcontracting and outsourcing service.

20090702022

## **Polsk producent af transportelementer søger partnere**

A Polish company specialised in the production of drive and transport elements (e.g. drive belts, conveyor belts) is looking for a commercial partner (agent/representative) in EU countries. Basic activity consists of manufacturing and selling drive and conveyor belts made of high-quality semi-finished products supplied by worldwide companies. Furthermore, company trades in other drive and transport elements, such as timing belts, V-belts, PTFE belts, chains, non-typical belts, different types of pulleys, fastening adapter bushings etc.

20090702014

## **Polsk leverandør af hydrauliske services søger handelspartnere**

A Polish company providing comprehensive hydraulic services is offering subcontracting / Outsourcing activities. They are interested in commencing cooperation with companies in the role of sub-contractor

20090701032

## **Græsk distributør af produkter til landbrug søger handelspartnere**

A Greek Wholesale Trade Company that distributes agricultural medicines, fertilisers- nutrition products- and agricultural supplies is looking for co-operation with companies for trade Intermediary services, logistics, and other types of co-operation.

09 RO 75DV 3E48

**Integrated system of ambulatory monitoring and rapid intervention dedicated to epileptic patients**

A Romanian company is looking for an integrated system of ambulatory monitoring and rapid intervention in cases of crisis dedicated to patients who suffer from neurological disorders of epileptic type. The technology requested can either be at the laboratory stage or fully developed.

09 FR 31I8 3E98

**A nanotechnology for profiling molecules in cells and tissues.**

A French University team offers a new method to profile molecules in biological tissues, like hairs, nails, synthetic skin or skin biopsy. The technique combines analytical imaging, with a secondary ions mass spectrometer (SIMS) able to detect very small quantity of molecules at the single cell level, and a strong knowledge in biological samples preparation. Depending on the molecules and tissues complexity, the team offers commercial agreement with technical assistance or research cooperation

09 FR 36L3 3E2M

**New generation yeast-based production platform for humanized glycoproteins**

A French SME, has developed a novel technology, which relies on a bank of glycoengineered yeast strains, each one producing glycoproteins with homogenous and exclusive mammalian-like glycan structures. This very cost effective and innovative process has proven to deliver high quality proteins, suitable for high quantity production. The company is looking for industrial partnerships from the biotech or pharmaceutical sectors, to upscale and provide worldwide its technology.

09 RO 66BW 3CS7

**Innovative methods and medical equipments for treatment and evolution prognosis of human subjects physical performance**

A Romanian company active in the domain of medicine is interested in innovative methods and medical equipments, particularly non-classical, unconventional, naturopathic, for human body treatment and for evolution prognosis of human subjects regarding physical performance. It is looking for research institutes, universities, hospitals and clinical companies, or manufacturers, for technical co-operation or joint venture agreement.

09 BE 0213 3E62

## **Low flavour impact natural preservative ingredients**

A multi-national consumer goods company looks for natural ingredients that have preservative properties (that would kill food borne spoilage and pathogenic microorganisms) and at the same time have little or no influence on the intended flavour. These natural ingredients would be used for food (both human and pet) and beverage applications. The company is open to different kinds of cooperation, depending upon the development stage of the proposed solution.

09 IL 80ER 3E68

## **An innovative removable product, integrated coffee jar seal, which preserves coffee freshness and aroma**

An SME has designed a revolutionary and innovative product in coffee marketing, an integrated removable coffee jar seal, which preserves the aroma and freshness of the coffee grains, even after the jar has been opened and which can be transferred from jar to jar, at the end of the use. The SME looks to expand its business in Europe, through joint manufacturing agreements, through distribution agreements and through technology transfer and technical consultancy.

09 FR 35K8 3DU4

## **New product from the manufacture of Vermicompost**

A Compost is potentially rich in phytohormones, amino acids and vitamins and the company seeks to develop a technique of extraction, concentration and stabilization of these compounds to market a liquid product with a higher added value than the worm, with possible incorporation of mushrooms, is an activator of leaf growth to use in organic agriculture, which differs from other conventional activators offered on the French market which are based on trace elements and not phytohormones. Innovative Aspects: With its high content of humic and fulvic acids, easily absorbed by plants and microorganisms living, this vermicompost is an effective, economical and environmentally friendly. It enriches and aerates the soil, contributes to a neutral PH and invigorate microbial life. It provides excellent performance and enhances the nutritional value of plants while preserving the environment and health of consumers and it has a logic of sustainable development.

09 FR 33J8 3E76

## **A test to determine microbiological biofilms**

A French SME provides a brand new technology for microbial biofilm challenge testing. This technology identifies and qualifies the status of the microbial contaminant (weak, strong biofilm / slow, fast growth). This test is used for choosing the best strategy to prevent or cure a biofilm. It is possible to select the best hygiene strategy against a large collection of contaminants. This technology may be sold as a stand alone lab apparatus.

09 FR 35k9 3E2G

## **Manufacturing of piezoelectric ceramics used in ultrasonic humidifiers**

A French company has developed ultrasonic fogging systems for chilled fruit and vegetables on retail display in produce sections of supermarkets. Other systems are used for disinfection with air. The SME is looking for a manufacturer able to produce, with high reliability, piezoelectric ceramics. The technology must absolutely be in full maturity.

09 ES 29h4 3DPB

## **Generation, development and exploitation of biotechnological knowledge**

A technology transfer company offers to match market demands with biotechnology research results. Seeking license agreements, cooperation agreements or joint ventures, the company offers to further develop and exploit (patented) research findings from universities or research centres. Areas of expertise include new raw materials suitable for biofuels and biomaterials and molecules of industrial, pharmaceutical, agricultural and nutritional value.

09 ES 24D8 3DAU

## **Physical-microbiological treatment of water used in the process of cataphoresis**

A Spanish company has developed a new physical pre-treatment of water used in cataphoresis. This pre-treatment reduces microbial activity and corrosion, eliminates already existing incrustations and inhibits its possible appearance in the surfaces treated by cataphoresis. The company is installing this technology in big automotive industries and would like to find local companies dedicated to water treatment or coatings that would give technical support to the systems that are already installed.

09 FR 36M1 3EBC

## **Electrochemical microreactor with an optimized design for intensified production of chemical compounds**

A French laboratory has developed an electrochemical microreactor whose main benefits are simplification of electrode manufacturing thanks to an electro-erosion process, amelioration of hydrodynamic features, and use of enzymatic catalysts. This technology improves security conditions in continuous processes reducing significantly energy consumption. Partners willing to make electrochemical synthesis or continuous analytical detections with microreactors are sought.

09 FR 36M1 3EB8

## **Matrix set of wind turbines**

A French laboratory has developed a matrix set of small wind turbines suitable with urban environment implementation. This secured and low cost device reduces significantly noise production thanks to the small size of the rotors. However, the combined surface is very large thanks to the size of the house or the commercial building. The matrix continues to yield power even if some turbines receive less wind or are damaged. The laboratory is ready to license or sell the patent rights.

09 IL 80EP 3EA1

## **Sensing technology sought for the detection and follow up of gas clouds released in the atmosphere**

An Israeli industrial company in the electro-optical instrumentation field is looking for sensing technology to be used in the detection and follow up of gas clouds released in the atmosphere caused by road accidents involving gas transport vehicles and by terrorist actions. The technology should be at a stage at which it would be relatively easy or inexpensive to set up demonstration measurements in controlled conditions to show its capability. Various options for cooperation are possible.

09 FR 36L3 3E9B

## **Sintering technology for manufacturing low cost & high efficiency photovoltaic silicon wafers**

A French SME has developed a sintering technology allowing to manufacture low cost (<0,4 €/wp) and high efficiency (>15%) silicon wafers for photovoltaic applications (solar cells). The process enables manufacturing from powders without the melting nor the sawing stages, then enabling a significant cost reduction. The company looks for technology collaboration with companies involved in the photovoltaic value chain in order to further develop the process and implement commercial applications.

09 FR 35K8 3E97

## **Catalyst generating biofuel using biomass with moderate heating**

A French engineering office has developed a new catalyst enabling generation of biofuel from biomass and a low amount of petroleum. This process requires a low heating temperature. The office is looking for industrial, research and financial partners in order to proceed with the development of the catalyst and devices related to the production of the biofuel, and promote the solution worldwide.

09 IT 55X5 3CXB

## **Easy-to-transport compact electric generation system with accumulation fuelled by photovoltaic or aeolian energy**

A firm located in Rome specialised in research, planning and implementation of electrical energy generation systems fuelled by a renewable source has created a line of electrical generators with accumulation. These generators are photovoltaic but also aeolian. Starting from their product portfolio of fixed systems, an innovative product line extremely compact and suitable for transportation (e.g. in an airplane) has been created. A commercial agreement with technical assistance is sought.

09 IT 55X5 3E9C

## **Energy storage with Methane production and Carbon Dioxide segregation.**

A high-tech Italian SME (mechanical/chemical engineering: H<sub>2</sub> separation technologies and technical/economical evaluation) offers ProGeo, an innovative process to store low cost electric energy as methane chemical energy. Methane can be used during high peak electric demand (high cost) or directly pumped into the net. The low cost electric energy comes from renewable sources or from large power plants, at night time. Partners sought are for technical/manufacturing and financial collaboration

09 IT 53U8 3E7D

## **Manufacture of precision mechanics components and energy production systems**

A company from South of Italy operating in the Precision mechanics for the manufacturing of last generation machine tools, precision mechanical components tested and complete with surface thermic treatments, and for their both mechanical and cabling assembly. It is seeking cooperation for production of new machines and for its sale and distribution, it is interested in Joint venture agreement for industrial partnerships.

09 GR 49Q1 3E9J

## **Request of odour control systems**

A Greek company active in the provision of odour control solutions, is seeking odour control systems for unpleasant/noxious odours which are either filter- or chemical-based. The Greek company is looking for a commercial agreement with technical assistance.

09 IL 80ER 3D2S

## **Exchange and transfer of technology for the production of thermal and acoustic isolation materials**

An Israeli SME producer of thermal and acoustic isolation materials made from Rock and Glass Wool, which are able to save energy and to reduce environmental contamination, is looking to exchange its technology with an existing European plant. The SME wishes to do this exchange of technology through Joint Venture agreements and Technical cooperation.

09 IL 80ER 3D3E

## **Technology for the bonding and stabilising of thermal and acoustic isolation panels**

An Israeli SME, a large and leading producer of thermal and acoustic isolation materials and products, made from Rock and Glass Wool, is looking for technology for the bonding and stabilising of thermal and acoustic panels, when performing building projects. The SME wishes to obtain this technology through license agreements and through joint venture agreements.

09 RO 75DV 3E7W

**Eco-technologies for ecological rehabilitation and reconstruction of contaminated soils near urban and industrial landfills**

A Romanian company is looking for a solution for ecological rehabilitation and reconstruction of contaminated soils near urban and industrial landfills. The technology requested can either be at the laboratory stage or fully developed.

09 RO 75DV 3E7R

**Knowledge-Based system for assessing wind potential energy**

A Romanian company is looking for an intelligent system for assessing wind potential energy. The system requested can either be at the laboratory stage or fully developed.

09 BE 0213 3E6R

**E-payment solution for professionals and for beginners**

A multi-national IT company with offices in Brussels has developed a professional e-payment solution aiming at making e-payments over Internet easier, flexible and safer. This allows users to fully exploit their e-commerce potential since the proposed technology supports nearly all means of payment: credit and debit card payments, online funds transfers or other national and international means of payment. License agreement is sought with IT integrators and banks.

09 ES 28F9 3DEH

**Ad-injection platform. Ads in mobile games to challenge the new era of advertising: mobile marketing**

A Spanish company has developed advergaming marketing applications that let companies incorporate their branding into video games that customers download to their mobile devices. With a personalized, nonintrusive approach, customers enjoy a dynamic, interactive experience that creates favourable awareness for the companies and their products. The company is looking for commercial agreement with technical assistance and technological cooperation.

09 ES 28F9 3DDJ

**Complete IT security solutions based on cryptography**

A Spanish Company specialized in the design, development and commercialisation of technology and systems of encoding and digital signature has developed a set of innovative and competitive products to fit a growing demand of solutions to secure e-transactions, encrypt critical data and digital signature of e-documents. The technology developed is based in a hardware security module and the corresponding software. The company is looking for commercial agreement with technical assistance.

09 ES 24E1 3DDB

**Remote monitoring and control, video surveillance and access control for industrial environments**

A Spanish engineering company specialized in industrial applications of information technologies has developed a total control and surveillance of any industrial process from anywhere in the World. It carries out the monitoring of critical parameters such as temperatures, flows, voltages, etc. It can be used for the monitoring of hydroelectric or biomass power stations, thermal solar installations, water purification plants and industrial installations in general.

09 FR 36M1 3EB3

**Software dedicated to support problem-solving**

A French laboratory has developed a complete and functional support tool based on instrumentation of problem-solving processes and capitalization with a view to experience feedback. This software offers several tools to facilitate the achievement of the steps of the problem-solving process. It allows finding quickly relevant past experiences and provides with performance indicators. The laboratory seeks a partner to commercialise the software.

09 IT 54V8 3E8N

**Mobile client for blogging platform**

An Italian company operating in the field of planning and production of software solutions based on new technologies has realized an application that allows a mobile phone to post a content (text, image, audio, video) to a Blog, using any type of available network (mobile phone network or Wi-Fi network). It is interested in getting to a licensing agreement or contracting a technical cooperation in order to adapt it to specific needs.

09 IT 55X5 3DWH

**Ultra Low Power Video surveillance IP Camera system with local processing capability**

An Italian SME located in Rome (Italy) with outstanding background in security systems has prototyped a Video surveillance IP camera that, although based on technology with a very low consumption, exhibits innovative features such as local processing capability (LINUX platform). This camera is therefore an optimal replacement of traditional IP cameras and security detectors and targets organizations in charge of Video Surveillance

09 BE 0213 3E6E

**Multi-level e-newsletter tool**

A Brussels-based interactive communication agency proposes a customizable multi-user, multi-language, multi-level e-newsletter generation tool that offers the possibility to create and send e-newsletters / e-mailings blending inputs from a central organisation with those of its local relays. Different kinds of cooperation are possible, depending on the identified partners profile (end-users or partners able to integrate the technical solution in their portfolio of products).

09 BE 0213 3E36

**Video balloons for effective event communication**

A Brussels-based company specialised in all stages of video production for clients, from shooting to postproduction (editing, compositing, colorimetry, DVD authoring, sound design, etc.), offers an original and effective way to make communication visible through video balloons. Commercial agreement with technical assistance is sought.

09 NO 79EM 3DZM

**Multi-server secure storage and sharing infrastructure**

A Norwegian company is looking for technology/know how to participate in developing a new file-sharing tool. Development of the tool gives a base for a wide range of possible collaboration applications internal to an organisation and cross organisations. The project should develop an interconnected multi-server infrastructure where dedicated servers are located close to users. The infrastructure will be used to integrate new collaboration services in projects, activities and social networks.

09 RO 74DQ 3E6N

**Integrated real time telemetry system using GPS GSM technologies**

A Romanian Research Institute has developed an integrated hardware-software solution of tracking and localising a fleet of vehicles using GPS, GSM, GPRS technologies. The system can also develop vector maps. The main advantages of the system consist in the flexibility of the application, access to web services and cost. The institute is looking for research partners to further develop the product as well as for industrial partners willing to test and use the application

09 ES 28G5 3DC1

**Improved flowerpot for indoor plants**

Spanish company offers a flowerpot equipped with a system of two static vertical tubes with individual faced lateral orifices that allow for air to pass through an inner space where water, nutrients and roots are placed. The major advantages over conventional flowerpots are the reuse of water, the avoidance of dirt and leaks, and the monitoring of the water level. The company is looking for industrial partners interested in a license or in a joint venture.

09 ES 24D8 3DEV

**Method for obtaining nanometric corundum powder**

A Spanish university has developed a new method for obtaining nanometric corundum powder based on a vapour-phase reaction between gaseous aluminium compounds and an oxidising gas. The new method makes possible to manufacture corundum powder with higher purity and smaller size of the particle than the traditional ones. It is ideal for its later use in the manufacturing of corundum ceramic pieces. The university is looking for a licence agreement.

09 ES 24D4 3DF1

**Leakage detection in fuel tanks**

A Spanish company is looking for a device for the detection of leaks in fuel tanks, capable of detecting leaks as small as 100 ml/h. The company is looking for partners to establish a technical co-operation in order to develop the required equipment.

09 FR 36M1 3EB6

**Silica coating of magnetic metallic nano-objects eliminating oxidation factors for biomedical and microelectronics applications**

A French laboratory has developed a process for coating magnetic metallic nano-objects with a silica layer. The key point is the elimination of oxidation factors from metal preserving the core magnetic properties under organic and ambient atmosphere. Oncology is particularly concerned for detection, display and treatment of very small tumours. These properties are also of high interest for in microelectronics domain. A partner is sought for developing the process under a license agreement.

09 FR 32I9 3DZV

**New method of contactless measurement of multi-layered 3D objects using shadowgraphy**

A large French research centre has developed a new contactless method and system to measure the inner-layer(s) geometric characteristics of multi-layered spherical or cylindrical 3D objects. This method is an adaptation of shadowgraphy techniques, using a newly developed mathematical model for an adaptation to any type of non-opaque materials. Industrial partners in the field of contactless measurement are sought for a licence agreement and technical cooperation.

09 BE 02I3 3E74

**Compressible open cell foam structure for fluid absorption and retention**

A multi-national consumer goods company looks for a compressible open cell foam structure for fluid absorption and retention. In case there is no existing available solution, the company is also interested in finding a development partner with the capabilities to design and develop such foam according to its specific needs.

09 FR 36L3 3E1O

**Supercontinuum and ultra wide band laser sources**

A French SME has developed a technology enabling to deliver supercontinuum and ultra wide band laser sources (from the ultraviolet to the infrared) in industrial and professional environments. The sources can improve significantly the performances of application devices in biology and medicine (high resolution imaging and diagnostic techniques), metrology, spectroscopy, and the environment domain (atmospheric measurements). They are looking for commercial as well as technical collaborations.

09 FR 36L3 3E1R

**Micro-manufacturing of complex components by inkjet printing**

A French SME has developed a technology enabling to manufacture complex multimaterial 3D components using a patented inkjet process. Based on tailor made inks, printing process and software, the technology enables to manufacture multi-layered ceramics, 3D electronic ceramic components, sol-gel coating. They would like to identify partners for commercial collaboration, collaborative development projects, licensing and investment partners.

09 BE 0213 3E6Y

**Palletizing system for polyouter (secondary package for dry laundry detergent)**

A multi-national consumer goods company looks for a polyouter (secondary package for dry laundry detergent) palletizing system, the objective being either to identify the optimal gripping mechanism for a robotic palletizer to manipulate and palletize polyouters, or to develop completely new, low cost (<\$120M direct cost) palletizing system for this product. The company is open to different kinds of agreement, with a preference to license agreements for already existing solutions.

09 IT 55W7 3E6W

**Piezopolymer Ultrasonic Transducers For Inspection Of Composite Materials**

An Italian group formed by a company and a research team has developed a new technology for piezopolymer ultrasonic transducers. These transducers have been successfully demonstrated for non destructive testing of composite materials that are now used in several industrial applications (sailing boats, helicopters, tanks containing high risk (dangerous) gas/liquids). The group is looking for manufacturing or commercial agreement with technical assistance.

09 IT 55Y0 3E3B

**Professional monitoring device for tracking athletes' performance**

An Italian spin off company specialized in professional monitoring devices that meet the needs of all sports professionals: accuracy, reliability, and portability has developed a small, wearable, and wireless product, specifically designed for strength assessment & monitoring, offering the ultimate stand alone solution to analyze different jumping tasks. The company is currently seeking contacts partners well established in the European professional sports market for licence agreements.

09 BE 0213 3E5R

**Pet hair removal technologies or products**

A multinational active in the consumers' products market looks for pet hair removal technologies, products or devices that are easy to use and work well on soft surfaces. The kind of agreement to be signed with the partner will depend on the solutions proposed by the potential partner.

09 BE 0213 3E5Z

**Packing robotics developments**

A multi-national consumer goods company would like to partner with academia and suppliers to understand the current developments in the area of packing robotics for application into future designs. Proposed technologies can be commercially available or developmental work in industry or academia. Therefore the kind of agreement which could be signed will depend on the development stage of the proposed solution.

09 BE 0213 3E5W

**Flexible raw material handling systems for production of liquids**

A multinational consumer goods company looks for flexible delivery, storage and transfer systems of raw material to support manufacturing operations of liquids. The outcome of this exploratory work could lead to potential new enabling technologies which could be considered for designing future liquids supply chains. The kind of agreement to be signed with the partner will depend on the development stage of the solution(s) proposed by the potential partner(s).

09 IL 80ER 3DKM

**Manufacturing of copper, brass, stainless steel, aluminium and metal based products for the electrical network and for the electrical panels**

An SME develops and manufactures copper, brass, stainless steel, aluminium and sheet metal based products, for the Electrical network and for the Electrical panels. The SME products include spacers, copper cable lugs, DIN bus bars, ground bars, electrical insulators, copper bars, copper flexible bars, fibreglass outdoor cabinets, heat shrinkable tubes, metal ducts and more products. The SME looks to expand its activities in Europe through Technical Cooperation and through Manufacturing Agreement.

09 FR 3116 3E59

**Modular handling system for stamping large presses**

A medium-sized French company specialised in stamped blank manipulation by mainly vacuum technology for automotive market and other handling applications has developed a modular system made of aluminium and carbon fibre. Wishing to increase its activities, the company is looking for commercial agreement with technical assistance in Europe.

09 FR 3118 3E4D

**Valorisation of plastics contained in Automobile Shredder Residues (A.S.R)**

A French company specialised in metal recycling, is looking for a technology of valorisation of plastics contained in A.S.R (Automobile Shredder Residues), in light and heavy fractions. The need is to recover plastics compatible with the extrusion process out of a flow of mixed plastics, rubber, wood, foam and textiles. The products to be sorted are at the same time dark and light colour. The technology should be available on the market or in a development phase.

09 FR 38M9 3E2E

**Dust removal device**

A French company specialised in the distribution of chemical and pharmaceutical goods (disposable pressure sensors, filtration devices) has developed a disposable connector allowing the removal of dust after a powder transfer between two containers. The French company is open to a license transfer agreement.

09 RO 66BW 3CN1

**Installations for surfaces covering by paint**

A small Romanian company designs, manufactures and installs lines for surfaces covering by paint using modern technologies and equipments. Type of partner sought: research institute, organizations specialized in surfaces painting for technical cooperation or factories using surfaces painting in their technological process for commercial agreement with technical assistance.

09 RO 75DV 3E8R

**Automatic unit for asphalt manufacture**

A Romanian company is looking for an ecological automatic unit for asphalt manufacture. Technology requested can either be at developing stage or fully developed. Preferred type of collaboration is commercial and/or subcontracting agreement.

09 RO 66BW 3CSD

**Installation for preventing the capsizing of light watercrafts**

A small Romanian research company has developed a new type of installation indented to avoid the capsizing of light watercrafts (M=200 tons, L=25m) & for redressing the watercrafts capsized due to inconvenient rolling. Main advantage: the increase of safety for watercrafts & passengers. Type of partner sought: technical cooperation with a research organisation for development, license agreement, joint venture or manufacturing agreement with producers of light watercrafts and/or board equipment.

09 RO 66BW 3CMU

### **Transport installations using spirals without axis**

A small Romanian company developed transport installations using spirals without axis; these are applicable in many domains such constructions, waste wood processing, agro-food industry, chemistry, etc. Main advantages: it's a simple, efficient and ecological system. Type of partner sought: mechanical engineering company for technical cooperation, end-user for commercial agreement with technical assistance.

09 RO 75DV 3CS1

### **Turbo-hydro-jet**

A Romanian inventor has developed a jet engine, double flow constructive adjusted to burn under post combustion regime, hydrogen obtained in the original place of the water steam, thermo-electrolytic dissociated. The inventor is looking for license agreement, technical cooperation and commercial agreement with technical assistance.
