

enterprise europe

Nyhedsbrev nr. 9

Det er gratis!

Provokerende overskrift der fanger, men det er faktisk ganske gratis for din virksomhed at søge og finde nye internationale samarbejdspartnere i 44 lande via Enterprise Europe Networks europæiske database.

På samme måde som vi hermed udsender 150 henvendelser, kan du få dit ønske om samarbejde, køb, salg, udvikling, søgen efter agenturer eller agenter etc. ud i over 550 regioner i 44 lande.

Bag hver henvendelse findes der en kort virksomhedsprofil, der siger lidt mere om, hvilke ønsker der er til samarbejdet. Finder du blandt dagens udbud en henvendelse du finder interessant, så kontakt os og vi sender dig virksomhedsprofilen.

Har du ønsker til forøget samarbejde med udlandet, eksport, import, udvikling m.v. så ring og lad os i fællesskab lave din henvendelse til udlandet - til alle 44 lande eller til udvalgte markeder. Din profil med ønsker om samarbejde optaget i databasen i op til et år. Til prisen gratis kan det ikke gå helt galt! Initiativet er dit - lad os høre fra dig!

Svensk energiselskab søger producenter af solceller

Swedish energy agency is looking for producers of big solar energy fields as well as construction integrated solar energy solutions. The Swedish Energy Agency is consulting in renewable energy, energy efficiency, transport and clean vehicles. They are a first class project organisation as well as business advisers to both big and small companies. They want to assist some of their customers in finding innovative solutions for solar energy in buildings.

20090115013

Fransk producent af øresnegle søger partnere

French company manufacturing premium quality in-ear-monitors for singers and musicians is looking for trade intermediaries. The company holds a leading position in the French market. Amongst other earpiece devices, the company also designs and manufactures smart hearing protections against noise that do not block out ambient sound. The company is leader of the French market when it comes to earpiece devices. The company manufactures in-ear-monitors for singers and musicians as well as smart hearing protections that ensure ear comfort without blocking out ambient sound, ideal for everyday "universal" use (professional and private environment). The company is looking for a distributor of their products. Potential partners could be: groups of audiologists, hearing aid manufacturers, chemistries, wholesalers of medical and health products.

20090112021

Fransk producent og importør af modelbaner søger distributører

French importer/manufacturer/wholesaler of railway mockups is looking for distributors. The company is involved in the import, production and sale of railway mockups is looking for distributors (retailers and/or wholesalers). The railways models are top range, in brass, in scale HO (1/32), O (1/43).

20090115001

Ungarsk producent af sportsudstyr søger forhandlere

A Hungarian entrepreneur specialised in the manufacture of sport equipments is looking for dealers in the field of sports archery in Western and Northern Europe. The items to distribute and sell are mainly traditional wooden longbows for sports archery: - laminated variations of the traditional English longbow, combined osage orange and hickory layers, Mary Rose style longbow . - Deflex-reflex longbow with a soft reflex effect, in American style, combined with osage orange and bamboo layers. - Selfbows carved from one-piece Osage orange staves, which follow the grainline of the wood. (which is why these bows require individual workmanship, there are not identical bows). - Viking bows - robust-style bows (originally made with yew, but in climates such as in Hungary osage orange as a raw material is more appropriate). These can be made in a laminated version combining osage orange and bamboo layer and can also be carved from one-piece staves. Sizes: length: between 68 and 78 (185 and 200 cm). All string nocks are made from horn, individually by hand made.

20090114014

Israelsk kæde af modetøj til piger og unge kvinder søger franchise-tager

An Israeli company which acts as an international franchise based retail-chain of concept-stores that offers fashion accessories & gifts for girls and young women is looking for master franchisers & partners in new regions, to develop its activity by retail chain, shop in shop or wholesale activity. Optional types of co-operation: Franchisee, Trade Intermediary services (agent, representative, distributor) Joint Venture.

20090114009

Fransk importør af reservedele til japanske og koreanske biler søger distributør

A French company, importing ordinary usury parts of motor vehicles from Japan and Korea is looking for a distributor, wholesaler or car dealership, who wants to diversify its activity and increase its amount of trade. The French company's brand is already represented throughout the world through a franchises network. It wants to branch out this network in Europe.

20090109016

Spansk producent af finerplader søger distributører

Spanish company dedicated to the manufacturing of veneered boards is looking for international distributor partners.

20090113025

Litauisk producent af slik søger handelspartnere

A Lithuanian company specialised in manufacturing confectionery products is looking for trade intermediaries (agents, representatives, distributors) and is offering reciprocal production and sub-contracting / outsourcing activities. The company can offer high quality handmade and machine made sweets and chocolates and is able to serve the super markets and the special gourmet shops. The company produces confectionery products and gourmet gifts for companies by the client order.

20090113023

Spansk producent af badeværelsesudstyr søger importører eller grossister

Spanish company manufacturer of sanitary products made of porcelain is looking for intermediary services, importers or wholesaler interested in working in the distribution in exclusivity of its products. The company looks for importers and distribution services of the sanitary products. They offer the exclusivity of distribution per country above his brand. The firm also is looking for partners for a possible reciprocal production.

20090113007

Islandsk software-producent søger handelspartnere

An Icelandic SME is offering complete life-cycle software development services. This is a lean company (low overhead) and it maintains certain core competencies but assembles the required team of experts for each project and subcontracts most, if not all, of the development effort. The company is drawing on a multitude of highly skilled and educated experts and handles development projects of various size and complexity. The subcontractors are IT companies as well as highly skilled individual experts which are proficient in the major methodologies and methods used (e.g. development methodologies and methods, project methods, testing and quality assurance) and the prevailing technology (e.g. Java, .net and SQL server, LAMP, Oracle and SAP). The company offers expertise in all major sectors: e.g. Finance, Supply Chain, Telecom, Logistics, Business Intelligence, Collaboration and Process Automation Technologies, Public Sector and Health-care. The company is looking for subcontracting agreements and has great capacity to do different types of outsourcing activities.

20090113002

Østrigsk konsulent-firma søger handelspartnere

An Austrian one-man-business is active in the consulting industry specializing in automotive. He is offering best practice experience as well as interim operating management functions in engineering, production, sales and marketing for partners in EU countries, CEE countries and USA. He is offering his services as trade intermediary and looking for joint venture possibilities, merger or exchange of shares.

20090112018

Engelsk designer af damemode søger handelspartnere

An English ladies fashion designer is looking for agents/representatives to sell her clothes collection. Her current collection consists of quality natural fibres in silk, linen and cotton with vibrant colours.

20090115037

Belgisk smykkehandler søger handelspartnere

Belgian company specialised in design and sales of jewellery is looking for partners who could help to develop the business activities, including creation of new distribution channels, taking care of logistics and providing investments.

20090112016

Luxembourgsk firma søger partnere til dokumenthåndtering

Luxembourg company specialised in tailor-made services for all legal and fiscal document processing projects, is looking for trade intermediaries and partners for a joint venture. In order to operate its two legal databases, the Luxembourg company has devised a production and publication tool specifically dedicated to legal and regulatory documents. The whole production chain is covered from any source to any type of publication (paper or electronic). The company is able to react quickly to any legal amendments and update its data bases easily. The solution is developed in java and is based on a very precise xml scheme. The same data base can be used to publish an Internet site or a book. Over the past months, the company has been surprised by the fact that its production tool seems to be of interest for other organisations, either in the market economy or in the public sector. That's why the company has packaged its solution in order to be able to sell or rent it. The company does not sell any content, only a solution. The company can also advise its partners with regard to its own experience. Therefore, the company is looking for partners abroad who would like to use this solution either for themselves or to offer services to third parties. The company is open to consider any type of partnership, especially trade intermediary and partners for a joint venture.

20090112011

Israelsk make-up producent søger handelspartnere

Israeli company specialises in manufacturing Professional makeup products; providing makeup artistic services and has its own professional makeup school is looking for: 1. An exclusive importer or local distributor for buying our new product line, a big advantage if he is already dealing with professional makeup. 2. Make up schools or seminars organizers that are interested in offering a new and innovative makeup study programs in Israel, or interested in inviting the makeup company's founder and leader artist to lecture abroad. 3. Companies that interested in developing their own makeup brand. 4. Makeup factories that interested in working with makeup artists.

20090109021

Bulgarsk firma indenfor fødevarerbehandling søger handelspartnere

Bulgarian company, specialized in processing vegetables, fruits, mushrooms and canned foods, is looking for and offering trade intermediary services; looking for partners for joint-venture and reciprocal production.

20090109007

Fransk producent af delikatesser søger handelspartnere

French company specialised in top range French food products from Normandy and Brittany is seeking partners. The company is seeking trade intermediary with interest in a large range of luxury food products from 2 French regions (Normandy and Brittany). The company is selling typical specialities from the areas such as milk, jam, prepared dishes, sausages, cheese etc. and confectioneries from many different manufacturers.

20090109002

Spansk producent af bandager søger handelspartnere

Spanish company dedicated to bandage manufacture and the technical textile industry is interested in finding distributor companies or commercial agents in Europe market. The company is manufacturing of all kind of bandages (cohesive, crepe, seaweed, gauze or elastic bandages) is looking for intermediaries service in distributor companies or commercial agents in Europe market.

20090113034

Fransk producent af reservedele til cykler søger distributør

French manufacturer of innovative components, accessories and services for bikes/bicycles is looking for European distributors for its products (exclusive agreement per country); the company is offering bicycles manufacturers its innovative products (Original Equipment Manufacturer specification to dynamise sales and increase margin); the company offers cities to optimise the quality of public environment and make riding by bike more attractive; the company is offering outsourcing (elementary parts: forged, plastic); the company is offering common research activity (electronic devices, batteries and solutions to locate bicycles)

08 GB 40n6 27HK

Rapid and simple sample preparation for the detection of Protein Aggregation

A London-based SME has developed a magnetic bead based sample preparation system for Protein Aggregation Diseases (prion diseases, Alzheimer's, Parkinson's and Huntington's Diseases). The kit is simple to use, rapid and is sensitive. The research tool is available for licensing to companies and research organisations working on Protein Aggregation Diseases.

09 GB 41n8 3CFE

A new pocket-sized spacer for use with asthma inhalers

A UK health service provider has developed a collapsible, pocket sized spacer for use with standard asthma inhalers. It is aimed primarily at the paediatric market, but can also be used by adults as an alternative to large spacers when out and about, during sport and when travelling. A commercial partner is sought to license the technology and to develop the product for the paediatric market.

08 GB 40n6 27HI

A second generation method for the rapid and simple detection of Creutzfeldt Jakob Disease (CJD) in brain, lymphoid and spleen tissues

A London-based SME has developed a simple 96 well microplate based assay solution for a rapid detection of the aggregated form of Prion Protein (PrPSc) associated with Prion Diseases such as Creutzfeldt Jakob Disease (CJD). The kit is available for licensing to both companies and universities as a research tool.

08 EE 21B9 0J5F

Device for objective measurement of muscle tone, elasticity and stiffness

An Estonian SME has developed a unique device for providing numerical values of muscle tone, elasticity and stiffness. It performs non-invasive and painless measurement of biological tissue. Compared to alternatives, its results are objective, operator independent, comparable and precise (sensitive). It can be used for early discovery of cumulative trauma, for fine tuning of sports or rehabilitation program, or for biomedical research. Partners are sought in all existing fields and for new uses.

09 GB 40n6 3CJD

Products, technology or targets with application in the development and/or commercialisation of Medical Imaging agents

A company based in the UK has a focus in the development and commercialisation of molecular imaging agents and contrast agents. The company is keen to meet third parties developing products or technologies that have application in this field, and is also interested in alliances with partners in the Therapeutics field who believe that imaging could add value to their therapeutic programmes.

09 DE 1593 3CGQ

Special Brassica Glucosinolates provide cancer prevention and cure and eliminate stomach ulcers

A German SME has established Brassica lines with highly elevated levels of glucosinolates and flavonoides, in a long-lasting breeding process. For the past two years the resulting sprouts have been used as adjuvant dietary supplements for clients suffering from cancer and ulcers. In addition to standard treatment procedures, this specific cancer treatment helps to reduce tumor markers and metastasis. The company is interested in industry partners for technical cooperation or financial resources.

09 FR 33J8 3CGI

Accurate and fast simulations on life sciences applications in a grid infrastructure

A French research group studies the interface between high-energy physics and life sciences. Its approach is to apply the computing methods and tools designed for high-energy physics to the fields of life sciences and health. The team has acquired a recognized expertise in the deployment of biomedical applications in Grid environments. The activities are focussed on two areas: medical physics and biomedical informatics. The research group is looking for technical cooperation and FP7 projects.

08 ES 28G1 0J5R

Ultrafast purification system to extract drugs and fats from blood and viscera.

A Spanish company, specialized in producing and commercialising diagnostic products, particularly toxicological kits, has patented a two stages method to identify and quantify drugs in blood and viscera. The aim of the test is to make fast diagnostics. The company is looking for a license or commercial agreement with a company.

08 PT 65BN 2RXK

Novel liposomal prodrugs for the treatment of tuberculosis and other mycobacterioses

A group of researchers from a Portuguese University has developed novel antimycobacterial liposomal formulations that not only protect antimycobacterial prodrugs against plasma hydrolysis but also enhance their activity, fighting more efficiently against diseases such as tuberculosis infection. The researchers are looking for academic/ industrial partners with expertise in in vivo studies on animal models of tuberculosis for a joint further development agreement.

09 GR 49R2 3CFP

Total knee arthroplasty endoprosthesis with third condyle and rotating polyethylene insert

A Greek orthopaedic surgeon has invented a Total Knee Arthroplasty endoprosthesis for the reconstruction of deformed knee joints. The endoprosthesis consists of a metallic femoral component, a metallic tibial component and a mobile polyethylene insert. The main advantage of this design is that it reduces the problem of component deterioration and offers full knee flexion. Partners are sought for licensing, technical and manufacturing agreements.

09 MT 59AE 3CEZ

Carton Cardboxes for a medical manufacturer

An international Maltese company engaged in the medical health sector is currently undergoing a cost-saving exercise and as part of this exercise would like to investigate the possibility of using alternative corrugated cardboard boxes suppliers. The company is willing to enter into a manufacturing agreement and/or commercial agreement with technical assistance with the prospective partner.

09 FI 30I1 3CHS

ADME studies for drug discovery and development

A leading Scandinavian ADME (Absorption, Distribution, Metabolism, Excretion) contract research company based in Finland offers expertise in ADME studies for drug discovery and development companies. The core competence is in metabolism and drug interactions. In addition the company offers natural product analysis and tailor-made problem solving based on LC/MS and NMR techniques (custom analysis) for biopharmaceutical and chemical industries. Partners are sought for technical cooperation.

09 FR 37M3 3CGH

Implanted device development for hormone therapy applications

A French researcher has successfully started to develop new technologies in an implant development with extended use for hormone therapy issues. He is searching an industrial partner for implementation. He offers for the partnership patented concept & technology, and also two thirds of the financial budget. He is looking for a company or research centre in Belgium (Wallonia region) in the medical field for further development, validation tests and manufacturing of the products.

09 GB 47P8 3CHK

Anti-bacterial technologies sought for liquid applications

A multi-national consumer goods company in North East England is looking for a biocidal active which can be plugged-in to existing antibacterial liquids to further enhance its biocidal activity and improve efficiency. The company is looking to establish a

08 DE 17A3 2RXT

High performance analytics for natural compounds

A German company for high performance analytics is able to identify structures of biomolecules by means of combination of LC-SPE-NMR/MS. The molecular detection system is suitable for rapid and reliable detection and identification of complex molecular structures. The technique is useable for special questions in the fields of analysis in organic synthesis, fermentation process and quality control of plant-pharmaceutics. The company is looking for commercial cooperation project partners.

09 IL 80EP 3CFN

Device to detect and determine driver's concentration and alertness level (prevents driving when under the influence of alcohol, drugs, fatigue)

An Israeli entrepreneur has developed a non invasive device that can be used to test and determine the driver's concentration and alertness level, and prevent the use of the vehicle if the driver does not pass the minimum level required. The device is low cost and can be used in any vehicle. Partners are sought to mass produce the marketable product, and to develop a marketing and local support scheme.

09 IL 80ER 2S2Y

Cosmetic / OTC hypoallergenic baby mousse that prevents, soothes and treats diaper rash

An Israeli SME has developed an internationally patented innovative cosmetic OTC hypoallergenic mousse, which prevents, soothes and treats diaper rash. The mousse which is sprayed on the diaper or baby's skin, based on natural ingredients, is easily spread and does not cause any pain on irritated skin as with pastes and ointments. The mousse is suitable for use when hand washing is impossible. The SME is looking for suitable partners for further development, sub-contracting or distribution.

09 GB 4407 3CH8

A novel targeted therapy for solid tumours (Phase II ready - Licensing/divestment: Worldwide)

A UK based SME is offering world wide rights to an anticancer agent. This drug is a targeted therapy for solid tumours. The company is looking for a licensing partner for this product.

09 GB 4407 2S3U

Tackling stiff and slippery cancer diagnosis

An Institution in the South East of England has developed an ultrasound imaging technique, the technique quantifies the stiffness and slip of suspect cancerous masses to aid diagnosis. A patent application has been filed and the institution is looking for companies interested in developing this into a commercial opportunity.

09 IL 80ER 2S4M

Innovative extrusion technology, raw materials and additives for manufacturing breakfast cereals

An Israeli company is looking for a technology, base materials and additives to produce breakfast cereals via extrusion process. Ideally, the technology should lead to the healthier product in terms of energy, salt and sugar content and functional additives. The technology requested should be at the stage of concept, R&D work or fully developed / ready to launch.

08 PL 63AV 27ML

Technological cooperation in concentrates for the food industry

A Polish SME is offering innovative technological cooperation in the range of food concentrates recipes composing and developing to be applied in the food industry's gastronomical sector (ice creams, waffles, pizza). The recipes constitute high quality raw material bases. They can create sensory values of the final product depending on the receiver preferences. According to the above, the company is interested in technological cooperation with food companies mainly from the gastronomical sector.

09 FR 37M3 3CIK

Sensory analysis for food products

A French engineering school with R&D activities offers its know-how and technological expertise for food industry products assessments through sensory analysis. These analyses are performed in a laboratory with special equipments, trained personnel and ISO 9001/2000 certification. The analyses are oriented to marketing & customers' behaviour, and aim to improve the taste and quality of the final products. Technical consultancy is sought with food producers.

09 FR 37M3 3CIM

Analysis and quality of food products

A French engineering school with R&D and consulting activities in food industry offers its technological expertise covering the whole spectrum of the industrial requirements: food safety & quality issues, physico-chemical analysis, shelf-life determination, HACCP and norms settings. Food producers (especially SMEs) are sought for technical cooperation and commercial agreements with technical assistance.

09 FR 37M3 3CIL

Process, formulation & industrial pilot lots for food products

A French engineering school in agro-food with R&D activities offers its technological know-how for the process, the formulation and the prototypes / pilot lots of food industry products. They offer a complete range of technological devices simulating industry equipments, and they conduct studies for the development / improvement of food products. SMEs and food industry producers are sought for technical cooperation and manufacturing agreements.

08 IT 53U9 2RY5

Development of a novel snack with potential beneficial effects on human health

Italian researchers want to assess the possible correlations between the resistant starch content of a typical local snack, made of flour, oil and water, and its beneficial effects on human health, in order to develop a novel optimised snack. Snack samples with variable resistant starch content are required to carry out the clinical tests. Then, cooperation with manufacturers of the snack is needed, as well as with medical institutions that should take care of the clinical aspect.

09 GB 4303 3CIR

An innovative bottle top

A UK SME has developed an innovative plastic bottle top to suit most bottles. It provides a spring loaded leak-proof bottle top design to allow liquids to be dispensed through a pouring top. The patented release action moves across the bottle top releasing the plastic spring immediately stops the flow. The bottle top has applications for the drinks, kitchen liquids and cosmetics markets. The company is seeking partners for a license, joint venture or manufacturing agreement.

08 LV 58AD 27LV

Biological agents for application in gardening and ecologically clean agriculture

A small Latvian company offers biological agents containing live micro organisms for plant and crop protection. The main advantages of these agents in comparison with conventional plant protection means are: a) they are free from harmful chemicals and b) can be applied in ecologically clean (biological) agriculture. The company offers the plant protection technology to other companies and seeks cooperation with universities and research institutes for new developments.

08 PL 62AS 27NX

Continuous process and installation of biodiesel production for local communities

Polish SME that specializes in plant equipment production designed a biodiesel installation that produces methyl esters from rape oil in a continuous process. The company has a pilot installation and is still working on the project. A partner is sought for technical cooperation in building biodiesel installations for local communities.

09 FR 34K2 3CF3

URGENT - Lightweight Thermal Solar Collector

A French SME is looking for a partner able to provide lightweight and low-cost thermal solar collectors. The French company seeks a Commercial agreement with Technical assistance to adapt the collector to specific needs.

08 PL 64BJ 2RW0

Biogas-fired heat and power plant – energy from waste dumps

A Polish technical enterprise offers a technology for waste dump biogas utilisation. The solution can be used on any waste dump sites and allows improving their cost-effectiveness, limiting the emission of irritant odours or preventing self-ignition, oozing and displacement of gas. The company looks for partners willing to buy the technology or partners interested in the development of the technology.

09 ES 23D1 3CIN

New biomass-based polymers synthesis and their application in textile industry (FP7-PS)

A Technological Centre is searching a partner for the project titled: New biomass-based polymers synthesis and their application in textile industry. The proposal is for the call NMP-2009-2.4-1 New biomass-based composite materials and their processing, with deadline on 5th February 2009. The potential partner can be a SME, a research centre or a university and it should have expertise in spider silk synthesizing.

09 LV 58AD 2S5N

Water treatment preventing settlement of scale

A cheap and effective method for treatment of mineralized water has been developed to prevent forming of scale in pipelines and water tanks. Cooperation partners are sought for further development and commercialisation of the technology.

08 LV 58AD 0IXW

Algorithmic Method for Analysing Environmental, Work Safety and Chemical risks

A Latvian SME has developed a methodological platform to evaluate the possible environmental, work safety and chemical risks in companies or municipalities. The company is looking for technical cooperation to adapt the methodology for specific partner needs.

08 RO 74DN 27MU

Power plant to obtain electricity using wave motion

A Romanian inventor has developed a device that uses flutters to activate a hydraulic engine, which can be used for vessel propulsion, water pumps operation, getting electricity and any other field that requires mechanical work. Advantages of this device are simple construction, low production cost and multiple uses. Cooperation for further development, production and installation of the device (licence, joint venture/commercial agreement with technical assistance) is sought.

09 GB 40n6 2S38

EEC Compliant Waste Cooking Oil Containers & Closed Loop Systems

A company based in South East England has introduced a novel EEC Compliant Container & closed loop system to help those handling waste cooking oils comply with regulations. The system is a clean, convenient and safe method to handle waste cooking oil from catering establishments, hospitals, leisure complexes, retailers, hotels, restaurants etc. The company is looking for partners in the aforementioned sectors to licence the technology and capability.

08 ES 26E5 2RZ9

Maintenance module for the continuous treatment of insulating oil

A Basque SME has developed an innovative system for the continuous treatment of the insulating oil used in large-capacity power transformers. This equipment mounted on the transformer can assure a constant quality of the oil all along the transformer lifetime. The SME is interested in Technical cooperation, with the aim of carrying out further test and Commercial Agreement with Technical Assistance in assembly and maintenance.

08 PL 64BJ 27MJ

Technology and production line for autothermal valorisation of biomass into biocarbon

An entrepreneur from Poland looks for the complete technological solution for production of so-called bio-carbon from different types of biomass. Bio-carbon will be used for combustion or co-combustion in existing power plants boilers. The technology should be already implemented on the market. The company accepts license agreement, commercial agreement as well as joint-venture agreement as a basis of cooperation.

09 GR 49Q1 3CF9

Technical solutions for the monitoring and control of street lights

A Greek IT company is looking for turnkey technical solutions, aiming at the monitoring and control of street lights. The system must have a degree of self-intelligent operation, an improved performance and must significantly reduce energy consumption. The Greek company is looking for technical collaboration.

08 IT 53U9 0J6V

Monitoring of the energy performances and pre-fault diagnosis for Renewable Energy Sources

A spin-off company based in southern Italy involved in activities related to the Renewable Energy Sources (RES), has developed a system to monitor the energy production efficiency of Photo Voltaic and wind plants. The company is looking for industrial partners interested in engineering the system prototype that is already available or research organisations for the joint development of new applications.

08 PL 64BD 0IYP

Environmental friendly technology of utilisation of the sewage sludge

A Polish company is looking for technology of utilisation of the sewage sludge that would meet all environmental requirements. The final product of the process should have the characteristics of the anthropogenic soil. The company is interested in commercial agreement with technical assistance.

08 PL 64BD 0IE2

Wastewater sludge mineralising

An experienced Polish medium-size factory developed the technology for entire mineralising of wastewater sludge from biological, communal and industrial wastewater treatment plants. The technology is not based on the flame-assisted neutralising techniques; it does not produce additional by-products such as NOx, dioxin, furans, carbon oxide, etc. The system is entirely separated from the natural environment. The company seeks a partner able to implement the technology on his local market.

09 IL 80ER 2S50

A new reactor and system enable repeated use of water for the treatment in open cooling system

An Israeli SME that provides solutions for the industrial, commercial, civilian and agricultural sectors, has developed and manufactures a new product enable repeated use of water by an electric process only without using any chemicals, thus contributing to substantial savings of resources, funds and to the health of mankind and the environment. The company seeks partners for collaboration

09 CZ 0744 3CFL

Technology for combined generation of heat and electricity power from combustion of green biomass.

A Czech SME dealing with food supplements is expanding its activities into growing of various plants for energetic purposes. The company is looking for technology for combined generation of heat and electricity power from combustion of biomass. The technology should be already on the market or fully developed.

09 IL 80ER 2S4Z

Development of a new solution for treatment of open hot water systems for consumption

An Israeli SME that provides solutions for the industrial, commercial, civilian and agricultural sectors has designed and developed a new product for treatment of open hot water systems for consumption. The product can solve damage of scale, corrosion, and bio-life forms, to protect equipment typical to these systems, including hot water, heat exchangers, pumps, faucets, end devices such as shower heads and regulating valves. The company seeks a partner for cooperation

09 IL 80ER 2S4O

New treatment solution of closed water systems for central heating, air conditioning and support of industrial manufacturing

An Israeli engineering and service company specializes and provides solutions for the industrial and agricultural sectors has designed and developed a new product for treatment of closed water systems for central heating, air conditioning and support of industrial manufacturing. The solution solves damage of scale, corrosion, and bio-life forms, to protect equipment typical to these systems include pumps, faucets and devices such regulating valves. The company seeks a partner for cooperation

09 AT 0105 3CGZ

Automated filtration system for monitoring microbiological parameters of drinking water

A European research consortium is looking for an automated drinking water filtration system for the monitoring of microbiological parameters. The system should be able to automatically filter various kinds of microorganisms (unicellular eukaryotes, bacteria and viruses). The filter has to be integrated in an analysis system. The main task of the partner is to develop the automated filtrations system. An agreement as supplier or licensee is possible.

08 DE 76DW 1N6N

Innovative Concept of Low-Energy/Passive-House Construction

A German SME has developed a concept enabling very low-cost construction of highly energy-efficient housing while offering a very wide range of architectural freedom. A model home has recently been constructed in Germany as proof-of-concept. The company is looking for co-operation partners from the sector of building construction or any related sector, including marketing, and end-users to develop market-ready solutions for different types of houses.

09 SK 69CT 3CH3

Chimney-pot for reduction of chimney tension

A small Slovak company has developed a unique chimney-pot for reduction of chimney tension with impact on reduction of emissions and fuel saving in novel way. Newly developed and patented chimney-pot significantly regulates combustion of exhaust gases from the body while improving the burning of all types of fuel in the boiler or stove and increasing their effectiveness. Partners are sought for the development of further applications and to exploit the existing know-how (License agreements).

09 SE 67CJ 3CG9

Dewatering machine for drinking water production and dewatering of dredger masses and polluted sediments

A Swedish SME is marketing a well developed dewatering machine for water cleaning into drinking water and separation of heavy metals, arsenic, quicksilver and other pollutions out of contaminated water. Quick and effective dewatering is needed to meet the increasing demands on deposit and destruction of e.g. dredge masses. The system can be used in e.g. harbours, mines, reservoirs and in the process industry. The company is looking for partners interested in licensing or implementing this technique.

08 IT 56Z7 2RZ2

Biofuel electric power plant for medium enterprise needs

An Italian company producing plastic components with a substantial use of electricity is seeking the best solutions for autonomous production of electric energy, by using for example vegetal biofuel and a biodiesel engine. A technical analysis is needed to seek and compare other possible solutions.

09 IL 80EP 3CHQ

Seeking Mobile Handset technology to support a short range high speed wireless connectivity application

An Israeli SME seeks mobile handset technology to support a short range high speed wireless connectivity application based upon their proprietary technology which enables the best trade-off between architecture, modulation methods, and high speed links. Microelectronics and Handset manufacturers are sought for joint ventures and co-development.

09 CZ 0744 2S3L

Online info technology – web communication, web collaboration, audio, video, instant messaging

A Czech company focused on online communication technologies has developed a web application for internal and external communication. This online info technology serves for audio, video and data communication. There is no need of any software installation on callers' computer. Only by clicking on „i-icon“ one can be connected with company, employee or business partner; share documents, send messages or chat. The company is looking for partners for commercial or license agreement collaboration.

09 GB 45P2 3CJM

P2P File sharing - An IT Forensic Technologies ToolKit

A UK company has developed an IT forensics technology for monitoring activity on P2P (Peer to Peer) file sharing networks. It can be applied to popular file sharing systems and used to monitor file sharing activities emanating from organisations worldwide. It can detect security risks within a network, bandwidth consumption & the illegal distribution of media. The company is looking to license the technology & for commercial partners to exploit these technologies for network security audits.

09 EE 21C1 3CIA

Test tool for eXtended Markup Language (XML) messaging applications

An Estonian SME offers a tool for functional tests of XML (eXtended Markup Language) messaging applications. The advantages of the tool are its customizability for any XML messaging protocol, tests automation features, and graphical user-friendly editor of XML messages. The SME is looking for industrial partners interested in testing their applications, software testing companies for cooperation and technical support, and software test tool vendors for integrating the tool into their offers.

09 IL 80EP 3CHX

Seeking Enterprise Software Technologies and Applications targeting SMEs

An Israeli SME, specialising in Balanced Scorecard methodology/applications, has developed web based software and providing software services on the web, is looking for enterprise software technologies to be integrated with their offerings. The sought technologies should target the SME market and have a significant local, regional or international presence. Partners are sought for technical collaboration or a joint venture.

09 IL 80EP 3CIC

Seeking Mobile Technologies and Applications to Enhance Fixed/Mobile Instant Messaging Service

An Israeli company, part of an international group that provides a well established IM (instant messaging) service is looking for mobile technologies and applications that can enhance their cross platform (fixed/mobile) service and products. Partners are sought for technical cooperation.

09 CZ 0747 2S2V

New generation of telephony and speech applications and automated services

A Czech ICT company created new generation of telephony and speech applications and automated services that can be used in various telephony and speech oriented market segments. The company is looking for partners interested to implement the proposed solution and integrate the technology platform with their technologies and products.

08 SK 69CU 0IRC

Software packages (configurator and runtime) dedicated to automation and industrial control system or office applications

A small Slovak industrial software development company has developed two software packages for application integration service providers. First of them is general usable, the other is usable for data integration of computer network devices or other devices using SNMP communication protocol. They can be used in the same time or separately for data collection. The company is looking for industrial partners, research institutes and companies interested in further development and testing.

08 PT 65BN 2RY6

Innovative content producers for mobile phones

A Portuguese start-up is looking for international partners interested in developing innovative contents for various mobile applications. The produced contents (video, sounds, images) must be compatible with different kinds of mobile phones or other kind of interactive marketing technologies. The interested partner should have their own contents or should be capable of producing them in a short time. The company is looking for commercial agreements with technical assistance.

09 GR 49R2 2S52

An innovative wireless broadband network for mountain regions

A Greek SME active in communications software development has developed high-speed wireless network and improved e-government, e-democracy and e-business services at a low cost specifically suited for mountainous areas. Partners are sought for commercial agreement with technical assistance.

09 IL 80ER 2S40

Seeking integration partners for innovative breakthrough security systems-tracing and monitoring video as service on-line VAAS solutions

An Israeli SME with proprietary technology and experience of security and management Visual solutions for strategic infrastructure and industrial facilities is looking for service providers and integration partners having complementary experience and expertise in security systems, tracing and monitoring video as service on-line VAAS implementation and HW/SW integration. Partners are sought for joint ventures and integration of the requestor's technology into their solutions.

09 FR 37M3 3CFX

Innovative solutions for multimedia contents networks

A French company specialised in marketing & communication through multimedia networks is searching for innovative solutions to broadcast and manage contents through screens. Innovative ICT companies are sought for technical cooperation, licence agreement and commercial agreement with technical assistance.

08 FI 30I2 27N2

Software For Analysis and Design of Laminated Composites and Sandwich Structures

A Finnish SME has developed a new software for the analysis and design of composite laminates and laminated structural elements. Presently the software is used mainly in the aerospace field but it has also been developed as a general tool for people dealing with composites. Partners from different fields of industry are being sought for the development of further applications and to exploit the existing know-how.

09 GB 46P4 3CGN

Platform for executing applications defined in standard Web languages on mobile phones and PDAs

A Scottish/Danish SME has developed an innovative platform which opens up mobile application development to the competent Web developer. The platform executes applications defined in standard Web languages to use standard mobile phone and PDA functionality such as call management, SMS and positioning. It seeks device manufacturers, mobile network operators and organisations with research and/or commercial interests in the development of mobile applications for vertical markets.

08 GB 77dz 2RXV

IT Infrastructure Capacity Management Software

A UK SME has enhanced its successful server capacity management software suite for both virtual and physical IT environments. The software is compatible with all major server types providing automated and comprehensive capacity management functionality. The company are now looking for partners to further develop the offering.

09 GB 47P8 3CHL

Prevention of hydrogen leakage in alkaline batteries

A multinational in North East England are looking for new approaches to preventing hydrogen leakage in primary alkaline batteries. Possible solutions could be: membranes; removal of excess gas; improved sealing or other solutions suitable for high volume battery production. Collaboration sought from partners with existing knowledge and materials leading to technical co-operation or commercial license agreement.

09 CZ 0744 2S4A

Interactive learning platform for elementary schools based on multimice access

A Czech company focused on educational technologies has developed an application enabling parallel connection of wireless mices to one computer. Up to 30 devices can be connected to single computer. With help of special courseware applications children are integrated into computerized education, even if computer lab is not available. The multimice system makes teaching more attractive and effective. Company is looking for partners for commercial or license agreement collaboration.

08 PL 64BJ 2RVZ

Cold welding in vacuum furnace

A Polish manufacturer of products for the railway, machine and electromechanical industry looks for a technology for cold welding in a vacuum furnace. The technology will be used in the production of elements for electromagnets working in oil environment. The company is especially interested in technical cooperation or commercial agreement with technical assistance with providers of technologies already proved and used on the market.

09 CZ 0744 2S44

Online Learning platform

A Czech company focused on online communication and educational technologies has developed a web application for distant language study. The technology offers full featured online sessions between teacher and students. Interactive board serves for presentation of videos and learning texts; all parties can use overlapping whiteboard to draw and mark. Visual contact within all students and teacher is supported. Company is looking for partners for commercial or license agreement collaboration.

08 PL 64BJ 2RW8

Production of granulated sulphur using water

A Polish research and development centre specialised in the chemical industry offers a production system for granulated sulphur using wet methods. This allows the creation of sulphur granules in water. This type of method reduces the overall dimension of the production plant and its costs. It is also environmentally friendly due to the fact that there is no creation of sulphur dust. The company looks for partners from industry sectors (e.g. chemical, metal,...) interested in applying the system.

09 IL 80EP 3CIS

Seeking Mobile Telephony Technologies in the Areas of Advertising, Payments, Content Statistics and Mobile Communities

An Israeli SME seeks mobile telephony technologies in the areas of advertising, payments, content statistics and mobile communities. Partners are sought for joint ventures, licensing, technical cooperation and commercial agreements.

09 IL 80EP 3CHR

Seeking Consumer Electronics Manufacturing Technologies to Integrate with Next Generation High Definition Connectivity Technology

An Israeli SME seeks Consumer Electronics (CE) Manufacturing technologies to integrate with Next Generation High Definition Connectivity based upon their proprietary technology which enables the convergence of video, audio and data into a single cable. Microelectronics and consumer electronics manufacturers are sought for joint ventures and co-development.

09 GB 4407 2S30

A new type of in vitro recording chamber

A University based in the South East of England has come up with a new submerged tissue slice monitoring chamber which maintains the anatomy and physiology of the tissue in vitro. Improved imaging of the tissues is also possible using the new device. The institution is looking for a partner that will help them commercialise the technology.

09 IL 80EP 3CIW

Seeking Cellular Data Gathering, Positioning and Tracking technologies

An Israeli R&D SME specialising in providing unique solutions for the gathering and analysing of geospatial information from heterogeneous sources and sensors is seeking cellular data gathering, positioning and tracking technologies and application. Partners are sought for joint ventures and technical cooperation.

09 FR 34k3 3CGS

Films in polypropylene ETHER sought

A French company is developing a new product and is so looking for a supplier of polypropylene ether films. A manufacturing agreement is sought.

09 EE 21B9 3CH6

Passive, low-cost and reliable power factor conversion for AC/DC converters

Researchers from an Estonian university have developed a new method for power factor correction in AC/DC converters. These patented transformers use passive and indirect technology for correction and are thus very cheap to produce and reliable, while providing high efficiency. Producers of electric supply modules for low power appliances like computers and producers of power factor transformers for industrial applications are sought for licensing cooperation.

09 DE 1067 2S6I

Humanoid and special robots

A German start-up offers expert services in development, design and manufacture of customised humanoid robots and robot components. The company seeks partners (research or industry) for technical cooperation in related research projects or to open up new application fields - e.g. in the security sector.

09 SE 67BY 3CIO

LDPE Autoclave reactor sliding bearings

A Swedish SME is offering custom designed sliding bearings for replacement of conventional bearings in autoclave reactors for LDPE (Low Density PolyEthylene) manufacturing. The sliding bearing increases the life time operation and makes the process much safer. The company is now looking for industrial partners within the LDPE production segment. The offer includes the adaption and implementation of the slide bearing technology to the partner's equipment.

09 GB 41n8 3CIJ

Process control of customised printed electronics

A UK company offers its leading edge process control expertise in using functional inks (conducting, dielectric, protective etc) with standard industrial printing equipment to produce printed electronic devices, smart packaging/labels, security etc. By controlling the complete printing process the functionality of the prints can be designed to meet client need. Advantages include optimised performance & reduced cost. The company is seeking commercial partners that use/manufacture such products.

09 GB 40n6 3CIE

Diverse collection of fungal cultures: an untapped source of valuable new molecules

A UK-based not-for-profit organisation houses a library of naturally occurring microorganisms collected over 80 years. The diverse collection consists of over 28,000 live and 400,000 dried organisms collected from 142 countries. Increasingly, companies are recognising that microorganisms present a rich and untapped source of chemical diversity for deriving natural products, with great potential and proven successes. Partners are sought for screening the strains for new active molecules.

09 GB 40n6 2S3I

Protein modification: novel method to prepare glycoproteins with enhanced chemical and enzymic stability

Researchers in a university based in the South East of England have developed a method for converting disulfide- to thioether-linked glycoconjugates, which can be used to prepare glycoproteins with enhanced chemical and enzymic stability. The university is keen to talk to companies interested in developing the commercial opportunity that this represents.

08 GB 40n6 0J5I

Efficient heat management in lighting and displays

A company in the South East of England with expertise in producing thick-film pastes and ceramic tapes has developed a technique to finely control the thermal management and reduce the junction temperature of LEDs used in lighting applications. The company is looking for partners to license the technology.

09 LT 57AB 2S45

Protein analysis by mass spectrometry and confocal microscopy for biomarker discovery, verification and investigation of function

Institute in Lithuania offers protein analysis by mass spectrometry and their sub-cellular localisation by confocal microscopy. Synergy of versatile equipment and unique knowledge in the area could be applied in search of protein biomarkers and their characterisation. Business, academic and financial partners are sought.

09 LT 57AB 2S46

Alternative micro and nanofabrication techniques based on directed molecular self-assembly

A laboratory in Lithuania offers knowledge in prototyping of bio/nanomaterials and structures. Surface-supported molecular/hybrid architectures can be fabricated with feature sizes ranging from hundreds of micrometers to a few nanometers, whereas their physical properties, chemical composition and biospecificity can be precisely controlled. Partners are sought for the development of a new generation of peptide/protein/cell/DNA arrays and for device on testing of new concepts.

08 LV 58AD 27LR

Software for On-line Monitoring of Company's Welfare

A Latvian SME has developed a software complex that allows carrying out on-line monitoring of the company's welfare. Advantage of this complex is that it uses all relevant data of the company and also optimises the goods or services flow. The company is looking for commercial agreement, including adaptation to adapt the technology for specific needs and conditions.

08 ES 28F9 0J6F

Electrometer for measuring ultra-low currents

A Spanish company devoted among other activities to design and manufacturing of scientific instruments has developed an electrometer for the measurement of ultra-low electric currents (1-10,000 fA). This technology works through wireless communication, battery powered, and can measure currents at high voltages, and of charged aerosols or ionized gases. The company is looking for commercial agreement with technical assistance and technical cooperation.

08 ES 25E2 2RZW

Purification and storage of hydrogen

A Spanish Technological Centre is looking for a technology –novel or already demonstrated- able to purify and store hydrogen generated through different chemical or biological ways. Resulting hydrogen will be further employed in a fuel cell to generate electricity. They are seeking a collaborative partnership or the like.

08 ES 25E2 2RZP

Single-process cost-effective fabrication of nanostructured materials: nanoporous oxides and arrays metallic nanowires

A Catalan university based in Spain has developed a single process for obtaining a nanostructured porous alumina membrane with ordered pores with a metallic contact at the back of the pores. In this process, metals can be electrodeposited in the pores to obtain metallic nanowires in an ordered array. Pore radius between 30-300nm can be achieved, with lengths up to 100micrometers. The technique is cost-effective and scalable to a high throughput. The licensing of the technology patent is sought.

08 PT 65BN 2RY2

Developers of mobile games

A Portuguese start-up is looking for international partners interested in developing games for mobile phones. The games must be compatible with different models of mobile phones, should have an easy customization (characters, story, texts, language...) and a short time of development. The main goal is to create games which can be easily adjusted with various promotional actions. The company is looking for partners for joint development or licence agreements.

08 ES 29h3 2RWD

Stain-remover machine

A Spanish researcher has patented an innovative technology concerning textile cleaning, based on insulating the part of fabric to clean and passing different liquids (water, steam, washing liquid, stain-remover) through it. Afterwards, the wet area is dried. It can be manufactured as a small appliance or as an industrial washing machine to improve stain-remover system of dry-cleaners. The researcher is interested in licence or technological cooperation agreement.

08 ES 23D1 27OG

Improved 3D Laser Digitiser

A Spanish Research Centre has improved its Laser 3D Digitiser; an automatic digitising system for 3D objects by means of telemetry and a multiaxial movement system. This improved system allows attaining the geometry of some solid objects by capturing points along the surface of the object, providing afterwards a 3D digital image that can be used in CAD systems. The research centre is interested in a license agreement or a technical co-operation. Other kinds of co-operation are possible.

08 GR 49Q4 27G1

Development of geopolymeric materials

A Greek Technical University has developed an innovative process methodology for the production of high-added-value products by geopolymerisation of aluminosilicate solids and industrial wastes. The geopolymeric materials developed can be used as building materials, as well as in high-tech industrial sectors. The university now seeks partners for technical co-operation, license or those interested in purchasing the know-how.

08 PL 64BH 27NF

Technology for drilling, cutting and marking steel profiles and plates

A company, based south-east Poland, manufactures of steel constructions and equipment, machinery for chemical industry plants, components of and complete intra-plant and technological transportation systems seeks technology for drilling, cutting and marking steel profiles and plates.

08 PL 63AW 27L9

A booking and dispatch system for taxi corporation sought

A Polish company is looking for a booking and dispatch system based on computer and telecommunication technology to make its work easier, quicker and more profitable, what is good for both the company and its clients. The company is looking for partners from industry or R&D for license agreement and technical assistance.

08 PL 64BJ 27NJ

Emergency door opening system

A Polish SME has developed a unique technology of emergency door opening system, especially from the inside of the doors blocked in a car accident. The purpose of the invention is developing of such an emergency system which enables a quick opening from the inside without an intervention from the people inside vehicle. The company considers a wide range of commercially oriented collaboration types offering the technical consultancy.

08 ES 25E2 27LW

Atomic layer deposition (ALD) coatings for innovative applications

A Catalan Technological Centre with deep expertise in materials technology seeks Technological Centre/ Institute/ University or company skilled in Atomic Layer Deposition coatings (ALD) to help develop versatile ALD techniques to innovative applications in different sectors such as jewellery, tooling and medical/health.

08 GR 49Q4 27FE

Plasma spray coatings of sol-gel ceramic nanopowders

A Greek high tech SME company has developed and studied a nano-particle ceramic powder. The company now seeks partners for technical co-operation, license or interest in purchasing the know-how.

08 ES 25E2 27M0

Bilingual Text-to-Speech Spanish and Catalan Voice Synthesis Technology

A Catalan technological centre together with a Scottish company has developed an advanced speech technology solution that encompasses two monolingual synthetic voices (Spanish and Catalan) plus a bilingual synthetic voice (Spanish-Catalan), all capable of advanced text-to-speech (TTS) conversion. All variants of English are also available. They are looking for a license agreement or a technical cooperation.

09 EE 21C1 2S2O

Family of sonar devices

A group of Estonian SMEs has developed a family of sonar systems that includes: multibeam and multichannel solutions, forward looking sonars, sidescan sonars, geological sonars, minehunting sonars. The companies are looking for a joint development partner for forward-looking sonar device. Additional partners are searched for distribution and maintenance.

09 GB 41n8 3CHO

Innovative pressure head valve system with improved performance over traditional float valves

A UK company has designed and developed a new pressure head valve which offers an alternative to the traditional float valves used widely in applications such as cold water tanks and toilet cisterns. The valve is a simple and compact device with a unique actuation mechanism which uses a pressure head of liquid to operate and offers improved performance over existing valves. Companies are sought in the valve industry for further development, production and marketing under license.

08 PL 64BD 0IF6

Large area thermoluminescence dosimetric system

A Polish Research Institute developed a new dosimetric system foreseen to be used in radiotherapy clinics. System consists of TLD reader equipped in a sensitive CCD camera and detectors in form of thin foils. Potentially, the technology offers superior performances in a field of dosimetry for modern radiotherapy techniques. The Institute is seeking for partners engaged in medical physics devices marked for further technology development and commercialization.

08 PL 64BH 27LE

Technology of drilling in glass

Company operating in south-east Poland, specializing in glassware manufacturing and trading alongside with standard grinding services is seeking technologies ensuring high quality drilling in glass.

08 PL 64BD 0J69

Incineration plant

A medium company located in the southern part of Poland is looking for a optimal solution for a small to medium sized incineration plant. The company wants to enter a new area of activity therefore it considers several options before taking the final decision. One part of the decision process is on-site visit in the several installations in Europe.

09 FR 32I9 3CHB

Innovative multiple purpose vehicle chassis

A French SME specialised in the design and construction of motor vehicles has developed and patented an innovative modular chassis architecture allowing greater stability in torsion, a secure attachment of the body, reduced cost and simplified implementation. It is looking for specific vehicle manufacturers willing to use this technology under license in their products.

09 GB 47P8 3CGL

Solutions for tool wear reduction

A multinational in the North East of England is seeking solutions for tool wear reduction and increasing the service life of process tooling and powder transfer systems, for example advanced tooling, material delivery or alternative processing techniques. The company are looking for partners for further development or solutions leading to a commercial license agreement.

09 IL 80ER 3CEU

GREEN materials to clean and increasing the strength of optical lenses and their molds during the manufacturing process

An Israeli manufacturer of "green" chemicals for industrial purposes has developed an innovative "green" substance for the cleaning and increasing strength of optical lenses and their moulds during the manufacturing process. It is able to use with or without Ultrasonic in a dipping process. The company seeks partners for joint venture

09 IL 80ER 3CET

A new green label Coolant and Lubricant material for high quality Metal Processing

An Israeli SME manufacturer of a wide variety of products for metal treatment, metal working & machining and plating and a member of the German quality organization G.S.B. has developed a new green label Coolant and Lubricant material for Metal Processing with an approval from the standards institute and the institute of Environmental Protection. The product answers to every required demands from this type of product. The company seeks partners for joint venture

08 GR 49Q4 0JGO

Innovative Ceramic Products

A Greek technological SME company has developed and studied a wide range of innovative ceramic products such as porous ceramics, ceramic powders and custom-made ceramics for special applications. The company now seeks partners for technical co-operation, for license, or those interested in purchasing the know-how.

09 IL 80ER 2S2I

Off-shore Management Technology / Experience in the Field of Software Development Implementation and QA (quality assurance)

An Israeli company is looking for a new off-shore management technology / experience in the field of software development. Ideally, the technology should include experience in working with off-shore companies and compliancy with market standards. The technology requested may be at any step of development.

09 GB 77dz 3CGU

Luxury Mattress-free Bed

A UK design team has developed and manufactured an innovative new bed which does not need a conventional mattress but achieves very high comfort levels. Partners with experience of luxury goods manufacture, sales and marketing are sought to collaborate on further technical development and early market development work with customers.

09 GB 4407 3CGP

Advanced Remote Sensor Telemetry System

A UK based Formula 1 technology company has developed a Human Telemetry Platform to provide a scalable end-to-end continuous monitoring platform that is both expandable and compact. The system is easily configured for a wide range of applications across multiple industries, from Occupational Health, Disease Management through to remote sensor networks looking at Chemical, Biological, Radiological and Nuclear hazards and is available for licensing and/or joint development of new applications.

09 IL 80ER 2S3P

A low temperature agent for bleaching and detergent applications- using of friendly environment materials

An Israeli based Speciality Chemicals company offers a new non-toxic, low temperature agent for bleaching and detergent applications (e.g. metal, Machinery, processing, elaboration,). Developed rely on extensive knowledge in the using of environment friendly materials. The revolutionary chemistry uses percarbamic acid-based formulations to deliver high performance at low temperatures with minimal environmental impact. The company seeks commercial partners active in bleaching agent manufacture

08 IL 80ER 2S0W

Fire and Heat resistant fabrics which endure temperatures up to 1200° C

An innovative Israeli SME develops and produces standard and unique fire and heat resistant Textile solutions which could endure temperatures up to 1200° C. The fabrics are constructed from Oxidized/Stabilized Polyacrylonitrile (PAN) yarns and fibers, which are inherently fire resistant, thermally stable and exhibit excellent resistance to chemicals and solvents. The SME is looking to expand its business in Europe through license Agreement, joint venture agreements and technical cooperation.

08 IL 80ER 2S28

High-end capabilities Line reactor-high pressure for handling highly aggressive materials and columns for high temperature

An Israeli SME specializing in the reactors field of activity, has developed a lined reactor unit and columns especially suited for handling highly aggressive materials for pressure up to 40 bar and temperature up to 200c0. The developed equipment offers unique solutions for several of industries: Bio-chemistry, Pharmaceutical chemistry, Organic chemistry. The company is seeking a partner for further development.

09 IL 80ER 2S31

A revolutionary vase concept, made of unique laminated polymers, which is thin as a paper when purchased and turns to a crystal-like vase when filled with water

An SME has developed designs and produces a unique and innovative expandable flower vase, made of unique laminated polymers, printed in a cutting edge technology, which is flat as a paper when purchased and stylish as crystal-like vase when filled with water. The SME which is looking to expand its activities in Europe is looking for joint venture agreements and commercial agreements with technical assistance.

09 IL 80ER 2S2Z

Irrigation micro tube pipes made from PES soft polyethylene

An Israeli SME has developed and produces unique and innovative soft and flexible irrigation micro tube pipes, made from PES which is soft polyethylene, a perfect substitute for irrigation tubes which are made from hard and non flexible PE and PVC materials. The SME is looking to contact new partners through joint venture agreements and commercial agreements with technical assistance.

09 FR 34K2 3CF0

Solid-liquid mixer for a quick chemical reaction

A French company from the Agrochemistry sector is looking for a mixing technology to carry out a quick and exothermic chemical reaction between solid and liquid reactants. The French company seeks a Commercial agreement with Technical assistance to rapidly implement such mixers in several of its plants.

09 AT 0111 3CGA

Developer and manufacturer of electric in-wheel-motors for new application

An Austrian company works on the construction of a special vehicle based on electric in-wheel motor technologies. The company searches for a partner capable of developing and producing an electric in-wheel motor with selected requirements. The partner needs to offer a vast experience in such technologies and should be interested in presenting his products in an exceptional concept car. The collaboration could be a technical cooperation, a joint venture or a manufacturing / commercial agreement.

09 GB 4407 2S4G

Signing Avatar Project

A major London based multinational broadcasting company is looking for partners to develop an avatar for the signing language. The aim of this project is to create a device that can automatically generate the small sign language video that is inserted into TV programming for the hard of hearing, from the text in the subtitles (and other resources). Previous attempts at this have suffered from a number of problems around the quality of the video and the accuracy of the subtitles.

09 GB 41n8 2S49

A new pollutant scavenging system to protect electronic, optical and sensitive machined metallic components from corrosion

A UK company offers a new, clean and non-deleterious anti-corrosion solution which can be used to protect electronic components and built up units from the effects of atmospheric pollution during periods of storage. The technology can be made available as a plastic (polyethylene) for bags or (high impact polystyrene) for thermoforming or injection moulding, or as a liquid (ink) to coat board or paper. European partners are sought for licensing or commercial agreements with technical assistance.

09 AT 0102 2S58

Simple method for the fabrication of cheap switchable or tunable Quantum Cascade Lasers

An Austrian university offers a patented technology which allows the simple fabrication of cheap, switchable or tunable high power light sources (QCL - quantum cascade lasers). Using a special layer, they can either provide a reversible change of the wavelength (switchable QCL) OR a controlled emission wavelength (tunable QCL). The university is looking for licensing partners or industrial partners interested in further developing and/or commercialising this new technology.

09 IS 81ET 2S6N

Financial management software

An Icelandic SME specialized in software development is looking for a developed financial management software to integrate into its people counting software platform in order to create a new business intelligence software. The SME is interested in a technical co-operation or a joint venture agreement.

09 DK 20A9 2S6R

Digital signage making it possible to produce an image directly on the surface of concrete elements by means of fibre optics

A Danish company is developing a totally new type of digital signage which makes it possible – by means of fibre optics – to produce an image directly on the surface of concrete elements. The company is looking for investors in order for them to contribute to finding and penetrating relevant markets.

09 GB 41n8 3CFG

Measurement of Oxygen with sub ppm resolution

A UK company is searching for advanced technologies to detect oxygen at sub ppm resolution. The technology is likely to come from the fields of Delta-F cells or Hersch cells. Desired features are: fast response time, continuous measurement, non-consumable. The type of collaboration is flexible. The company can access global markets.

09 NO 79EK 2S5D

Safe Packaging and transport of glass windows with wooden frames

A Norwegian research institute (RI) is looking for technology related to packaging and transport of windows. The RI is part of a network of companies with needs for solutions. Windows are traditionally placed on pallets by the window manufacturer and transported to building site by vehicle/train. Different pallets and systems for fastening the windows to the pallets are of interest. The systems should handle all window sizes.

09 FI 30I1 2S6K

Expertise in Demanding RF and EMC Design areas

A Finnish SME, specialized in product development and research in demanding RF (Radio Frequency) equipments, offers services in RF and EMC Design areas including EMC (Electro Magnetic Compatibility) testing. Services are based on efficient design and simulation tools as well as EMC and electronic laboratories utilizing state-of-the-art RF measuring instruments and other tools. Partners are sought for technological co-operation in EMC and RF Design areas.

09 IS 81ET 2S6A

Risk management software

An Icelandic SME has developed a risk management software designed to guarantee security in the processing of information. The software is designed for companies, organizations and government bodies. The software is based on the methodology of the ISO/IEC 27001 and ISO/IEC 27002 security standards. The company is looking for a commercial agreement with technical assistance and co-operation agreements.

09 IT 53V3 3CFB

A technology to measure the velocity in rivers with non touch devices

An Italian group of research institutions and SMEs is looking for a technology to measure the velocity in rivers with non touch devices, like radars. The technology should be able to measure the surface velocity or, if possible, the velocity some depth below the water surface even during severe storms or extreme hydrological events. The device will be included in a more general discharge measurement system and should be well developed, but open to specific required changes. Industrial partner is sought

09 GB 77dz 3CJT

Amphibious Seaplane

A UK company has developed and patented new hull forms that enable seaplanes to match the capacity and performance of landplanes and operate reliably in a wider range of conditions. Designed with a wing-fold facility for access to docks and marinas, an opportunity exists to replace a large percentage of the seaplane population and expand aviation into the maritime sector. The company requires partners for financial and manufacturing assistance to commercialise a two-seat amphibious aircraft.

09 IL 80ER 2S2U

A device designed to enhance the diving experience and safety using technologies for digital communication and navigation

An Israeli SME has developed and produces a unique and innovative device which is designed to enhance the diving experience and safety using a combination of technologies for digital communication and navigation. The device is using sophisticated ultrasound technology, advanced digital signal processing, innovative application software, small acoustic antennas and lightweight power units. The SME is looking for joint venture agreements and commercial agreements with technical assistance.
